

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: waitsburge State: wa

ZIP: 99361 Country: usa

Latitude: n 46°23'51 Longitude: w118°13'888

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 05/21/2016 Local Time: 9:00
mm/dd/yyyy

Time Zone: pacific standard

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N543SD

Manufacturer: arrow falcon

Model: OH58-C

Serial Number: 70-15543

Year of Manufacture: 1970

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☐ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 3200 lbs

Weight at Time of Accident/Incident: 2503 lbs

Number of Seats: 5 Flight Crew Seats: 2

Cabin Crew Seats: NA Passenger Seats: NA

Number of Engines: 1

Category of Aircraft

- ☐ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☒ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☐ Normal
- ☐ Aerobatic
- ☐ Balloon
- ☐ Commuter
- ☐ Transport
- ☐ Utility

Special

- ☒ Restricted
- ☐ Limited
- ☐ Provisional
- ☐ Special Flight
- ☐ Experimental
- ☐ Special Light-Sport
- ☐ Experimental Light-Sport

☐ Certificate of Authorization or Waiver (COA)

☒ None

☐ Unknown

Landing Gear

(Check all that apply)

☐ Retractable

☐ Tricycle

☐ Tailwheel

☐ Amphibian

☒ High Skid

☐ Emergency Float

☐ Skid

☐ Float

☐ Ski

☐ Hull

☐ Ski/Wheel

☐ Other Launch/Recovery System

☐ None

☐ Unknown

Engine Type (Select one)

- ☐ Reciprocating
- ☒ Turbo Shaft
- ☐ Turbo Prop
- ☐ Turbo Jet
- ☐ Turbo Fan
- ☐ Electric
- ☐ Liquid Rocket
- ☐ Solid Rocket
- ☐ Hybrid Rocket
- ☐ None
- ☐ Unknown

Fuel System Type (Reciprocating)

☐ Carburetor ☐ Fuel-Injected

Engine	Engine Manufacturer	Engine Model/Series	Manufacturer's Serial Number	Date of Mfg. mm/dd/yyyy	Rated Power ☒ Horsepower or ☐ lbs of Thrust	Total Time (hours)	Time Since: Inspection (hours)	Overhaul (hours)

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Severe damage to main rotor blades, nose section and complete separation of tail boom and tail rotor assembly.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Accident date 5/21/2016

Pilot Kyle Lovell

Helicopter 543SD

Location Waitsburg, WA

This is my recount of the accident that occurred on 5/21/2016.

After finishing a 215 ac field in Dixie, WA which was my first field of the day. I headed north along Hwy 12, where our next field was located two miles south of the town of Waitsburg. I arrived at approximately 8:30 am and found a place to land where I could wait for the mix truck to show up. Upon arrival Jake Landgraf, who is with CHS farmers Co-op and I discussed the map. I took off in order to recon the field and allow the mix truck to get in position. I began by reconing the west side of the field, which was along Hwy 12, being the most sensitive area this is where I planned to start the application. After a close look there I flew the northern border out to the eastern edge and then began south bound. I took note of a set of tall lines running north to south, about mid field, I had also noticed these lines on my initial recon before landing. Upon arriving at the south east corner of the field, I made a turn downhill and flew the southern border in a slight descent. Prior to crossing the set of powerlines mid field I looked at the pole out my right window making sure I was above the pole, not realizing the pole on my left side, which was on my blind side, and no longer visible, was actually several feet taller than the pole on my right, as well it was oriented slightly more uphill than the pole to my right, this caused the power lines to rise slightly from north to south. Upon crossing the lines a single wire attached to a bell several feet taller than the pole crossed over my left skid. The aircraft immediately was pulled to an extreme nose low attitude and continued to invert. At some point the wire broke approximately one foot from the bell on the northern pole, which was oriented on the right side of the aircraft. At this point the aircraft began to level off. When the wire snapped it came back through the main Rotor blades, contacting the nose section, right door and other areas of the aircraft. The left spray boom was also pulled up into the main rotor system. There was also a large amount of smoke that filled the cockpit. The flight controls were extremely stiff and the aircraft shook violently, and was near uncontrollable. I lowered the collective full down and began an autorotation to the wheat field. I could still hear the engine running and attempted a powered landing.

As I began to pull collective it became apparent that hovering flight would not be possible. I immediately began to flare the aircraft out harder in an attempt to get rid of any forward movement prior to impact. As I approached the ground I raised collective to cushion the landing, the aircraft was still moving forward at about a walking pace when I contacted the field. The contact was similar to that of a normal landing, but the forward movement caused the aircraft to roll forward onto the front of the skids, the result was that the main Rotor blades contacted the tail boom causing a boom strike. The aircraft rocked back down onto the skids. With the aircraft still shaking violently I rolled the throttle to idle, then immediately pushed the idle stop and killed the engine. I then pulled the fuel cut-off and waited for the blades to stop spinning, before exiting the aircraft. The tail rotor and boom landed approximately thirty ft. at the 1 o'clock position, the vertical fin was located about 100 ft. at the 1 o'clock position.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I believe a more thorough high recon, prior to application planning and my low recon would have greatly decreased the chances of this accident occurring.. also had I crossed over the pole prior to hitting the wire, sufficient altitude would have been ensured. as an application pilot, crossing wires at a power pole is not always possible during the actual application, because we have to cover every inch of the field. however this does not mean during a recon we cannot always cross at a pole to ensure safe altitude, as well as get a better look at the wires, and their direction of travel.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
