

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Hardwick State: NJ

ZIP: 07825 Country: Warren

Latitude: 41:03:0.886N Longitude: 74:56:24.994W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 05/25/2016 Local Time: 01:36PM
mm/dd/yyyy

Time Zone: Eastern

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N63761

Manufacturer: Rolladen-Schneider OHG

Model: LS3-A

Serial Number: 3286

Year of Manufacture: 1979

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

- ☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 1040 lbs

Weight at Time of Accident/Incident: 800 lbs

Number of Seats: 1 Flight Crew Seats: 0

Cabin Crew Seats: 0 Passenger Seats: 0

Number of Engines: 0

Category of Aircraft

- ☐ Airplane
☐ Balloon
☐ Blimp/Dirigible
☒ Glider
☐ Gyroplane
☐ Helicopter
☐ Powered Lift
☐ Rocket
☐ Ultralight
☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☐ Normal
☐ Aerobatic

☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Hull crushed from under, especially near landing gear, behind pilot seat;
Canopy destroyed, instrument board collapsed away from pilot;
Left wing cut when it hit the tree 1/3 from tip, right wing intact.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I took off at around 13:15 EDT from Blairstown, NJ and released from the tow plane at about 3000 feet MSL at about 2 miles from Blairstown airport (K1N7), above the reservoirs on top of the ridge North West of the airport. I then proceeded with normal flight configuration (gear up, no flaps) and glided back toward Blairstown airport with the intention to pass the airport as mark to start a cross country task between Blairstown NJ and Wurstboro NY. This is a relatively usual route for glider cross country flying, I had already accomplished a much longer flight all the way North to the Catskills mountains the Friday before, flying through the same Wurstboro area.

From the task starting point above Blairstown airport I then flew North East, toward the woods and the ridge which follows the border between NJ and PA; I was maintaining roughly 2800 MSL altitude into what seemed to be light air. My impression, given earlier observations on tow and based on my weather observations prior to the flight, was that I was going to find thermal lift near the ridge and be able to gain altitude before proceeding further north toward Wurstboro. When I reached the Millbrook powerlines (which is a landmark indicator used by local glider pilots, about 3 miles north of the reservoir, crossing the ridge perpendicular) it became obvious that I was not finding the expected thermals and instead I was getting lower in altitude from around 2400 feet MSL down to 2000 feet MSL. Because I was getting low I decided to fly away from the ridge which at that location tops at between 1500 and 1800 feet MSL. At that time I decided to turn right toward the East following the power-lines (and clear of them) and continued to look for lift while I was beginning to also look for a possible landable area in case I could not find lift at all.

At around 13:30 EDT as I was continuing to descend with no lift in sight, I reached 1800 feet MSL, it seemed urgent and imperative given the terrain varying between 500 and 1000 feet MSL that I proceed with an out-landing, as the option to fly back toward an airport now seemed impossible. About 1 mile East from the ridge and clear from the power lines I identified a small clearing in the woods near the intersection of Sand Pond Rd and Shannon Rd, with two or three small fields; I flew two 360 turns above two of the candidate fields in order to prepare for a safe approach, there seemed to be nobody on the ground or no property and no other obstacles other than trees. On the second 360 approach turn around the lower field, I put the glider into landing configuration, gear down, 5 degree flaps, flying at about 55 knots. Landing there seemed possible, although very challenging due to the presence on very high trees of uneven height all around a relatively short field (300m approx) and because of the uneven slope of the terrain itself. Even though it looked challenging, that field seemed to be the best option around, as all I could see everywhere else was trees, trees, trees.

However, at around 13:35 EDT, when trying to make a final turn into the field I had selected, I ended up flying a few feet too low and my left wing caught into some of the trees standing at the opening on the East side of the field. The glider then entered into a loop, rotating counterclockwise, toward the wing that got caught first obviously; the glider slowed down as branches were getting crushed and the glider finally crashed landed on the ground by the tree trunk. I observed some of the obvious damaged and as I had remained conscious the whole time I was able to immediately radio for help.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Don't fly this low above these woods in the absence of clear indication of lift or not...

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
