NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed Friday Harbor (W33) about 11:20 a.m. for Arlington (KAWO) - No services obtained.

Prior to landing: Entry to pattern was a normal 45 degree entry for landing on runway 34. Downwind leg was extended substantially to allow for another aircraft flying a long straight in final. After the other aircraft passed abeam my location I entered base leg and began my descent on a very long final and announced I was following the first aircraft toward the runway.

Final approach to landing: A stabilized final approach was established with a correction for wind. (Wind was 310 at 3.) Upon location, I announced a short final approach and at the appropriate time flared for a normal landing. Yoke and throttle were fully pulled back just prior to contact.

Landing: Contact with the runway mild, straight ahead and on centerline with left main gear making first contact and the right main gear very shortly afterwards. Yoke pressure was slowly eased and the seconds later the nose gear made contact with the runway. The nose gear made a "thump" sound after contact. The aircraft then began to drift off the centerline. When I attempted to correct for the drift I noticed that the rudder/ steering were ineffective and seemed to may have been skidding, something wasn't right. When approaching the runway exit located at Alpha 2, I found that I needed full right rudder with hard right rudder pedal pushing along with a bit of right braking to make a right turn. In the process of turning the aircraft onto the exit, (and in the space of just a few seconds) the nose section of the aircraft unexpectedly and continuously lowered until making full contact with the ground. I quickly realized that the nose gear had collapsed. The aircraft then came to a slow (and gentle feeling) stop.

After the stop: I immediately shut off the alternator & battery power and set the magnetos to the "off" position and removed the key. I asked my passenger if he was okay and he said yes. I then asked him to exit the aircraft as soon as able, which both he and I did. I called MATA to report the incident. The airport managers arrived on their own soon afterwards. We then shut off the fuel selector and stopped fuel from draining out of the left wing vent.

Mission Aviation Training Academy (MATA), Airport and Fire personnel were all soon to arrive at the location. Airport managers then had me speak simultaneously with the FAA and the NTSB (in conference call) over their cell phone. I provided all my personal information, pilot license number, phone number, address etc. and answered all their questions about events as they happened. Afterwards the airport manager asked me several similar questions while filling out a written report. The aircraft was then released to MATA staff who removed the aircraft back to the MATA hangar.
