Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The fuselage sustained extensive damage in buckling and compression, bottom and top. Forward leading edges of both wings are compressed and the wings appear to be broken at or near the attaching points. The main landing gear collapsed. The propeller blades are both damaged in bending, twisting and breaking. The cockpit glass is broken. It appears that the airplane is a total loss. Also, damage was done to a fence and small pine trees.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I checked the weather information located at the Dublin, Georgia Airport weather center in the terminal. I completed a through Pre-Flight of the Airplane. I was the only person on board the airplane. Take-off, from W.H. "Bud" Barron (DBN), Dublin, Georgia, on Tuesday, June 7, 2016 at approximately 4:00 PM EST and flight en-route was normal. Destination was Santee Cooper Regional Airport, Manning, South Carolina. The terrain surrounding the Airport was mostly flat, with Trees and Water. The approach end of Runway 02 is over water from the Lake. Approximately eight (8) miles out from the Santee Cooper Regional Airport (KNMI, Manning, South Carolina), I received the weather information on the AWOS for the Airport. The weather was reporting clear. The wind was approximately 280, Degrees, with Speeds at 6, gusting at 10. The runways are 20 and 02 headings, so landing either way there would be a direct crosswind. I decided to land on Runway 02, because there appeared to be trees at the approach end of runway 20. Also, while circling above the airport, I could not identify or see the Wind Sock. The traffic pattern and approach was normal. At approximately twenty feet (20 ft.) above the Ground, I initiated a flare to land on the runway. The airplane began to drift to the left and the left wing began to drop down. All control inputs did not correct the drift or turning. I applied full throttle, in an attempt to regain control of the airplane and do a go around. The left wing contacted a fence on the boundary of the airport and the airplane crashed into a grove of small pine trees. I exited the airplane and walked toward the hangars on the airport. People from the airport met me and assisted me. I could feel the wind blowing and realized that most probably that I had encountered shifting winds, which therefore I encountered a Tail Wind when I flared the airplane for landing.
