Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Prop, engine (hard stop), nose gear, main gear (left), left and right wings

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was returning from an Angel Flight to Cincinnati (KLUK). The winds at Shannon (KEZF) were reported in the middle teens gusting as high as 30. The direction reported was about 60 degrees off runway 24 at 300 degrees. TAF's for Quantico were indicating that winds would be lower near my arrival time. As I monitored the Shannon winds on my return flight the speeds and gust strengths were decreasing.

At the time of the incident the broadcast weather was low teens with gust below 25 mph.

I made a normal approach with half flaps. My airspeed on final was 90 mph and decreased to 85 just before the threshold. I moved the throttle to full off just before touchdown. Touchdown was approximately 1/3rd down the runway. The stall warning horn was sounding just before touchdown. The aircraft was on center line and slowing.

Just as I was passing the ramp area, the aircraft made a sudden turn to the right. I was unable to get it turned before leaving the runway and losing braking on the grass.

The aircraft made a sweeping arc across the grass clipping a tree with the right wing, collapsing the nose gear and left main gear and going through a drainage ditch. After the aircraft was spun by the tree it came to rest.

Master, ignition, fuel and ELT were shut off.

Battery was removed.

Gerald W. Knouff, an FAA Designated Examiner and consultant to Shannon Airport management made the contacts to the FAA and other necessary notifications.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Landing at KRMN where winds were more favorable to the runway or delayed flight to allow for the forecast lower wind velocity in the TAF from KNYG.
