Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wingtip severed; nose/cowling deformed to left; prop curled; right wing heavily damaged w/ spar deformation forward.

Several peach trees in grove lining E side of runway damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At approx 10:30 AM EDT I departed Monroe NC (KEQY) for York, SC 01SC, a private turf strip, for a brief stop to visit the Bush n Vine at the North end of the airfield. We overflew Rock Hill KUZA enroute (about 10 miles from York), and got the weather from their AWOS, as there is no weather available at York. The report was winds 250 at 9.

We landed uneventfully on 18 at York, and about 20 minutes later prepared to depart on Rwy 18, a 2580' turf runway that varies from about 65-70' usable width at the North end to 110' at the South end, and with a slight uphill grade in the first 4-500' only. I preflighted the aircraft (walk around, check control surfaces, check oil, etc) and found no anomalies. There was no windsock visible, and Rock Hill AWOS was not readable on the ground, but winds on the ground were consistent with the earlier AWOS, the conditions at landing and well within the 20 kt. demonstrated crosswind capability of the aircraft. I elected to depart on 18 to take advantage of the slight forward crosswind component and avoid departing with a tailwind component over a populated area at the end of 36.

Rollout was normal, using short/soft field technique. Shortly after the mains lifted off, at about 3-6 feet above the ground and in ground effect at about 55 mph airspeed, a gust of wind from the right pushed the aircraft to the left toward a row of peach trees lining the runway. I attempted to apply additional correction for the crosswind drift, but altitude was too low to get enough correction without dragging the right wing. The left wing tip impacted a peach tree, and the aircraft spun around to the left and came to rest along the treeline, nose pointing North. My passenger and I were able to exit the aircraft without undue difficulty. There was no fire, nor did the fuel tanks appear to be breached. I suffered only bumps and bruises, but the passenger was a bit woozy, so we were both transported to Piedmont Medical Center for precautionary evaluation. I did not require treatment, and the passenger was evaluated, found to have only minor injuries and was released two hours later.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Because 18 is narrow at N end , depart right of center of 18 to allow for possible crosswind effect.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
