Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right main fixed gear torn from the aircraft from the deer impact; damage to the lower surface of the right wing and flaps and aileron caused when the wing settled onto the runway after landing gear separation; light damage to the lower fuselage behind the wing, right side, from scraping the runway; damage to the stabilator leading edge from impact with the separated landing gear and the trailing edge (the trim tab) from contact with the ground; damage to the tail strut - some wear - from scraping the runway. No front edge damage or prop strike.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was PIC in my PA 32 (Cherokee Six), accompanied by Jim Petrizzi, an instructor whom I had engaged for an instrument proficiency check, and our mutual friend and fellow instrument-rated pilot, James ("Skip") Straut. After the proficiency check was completed, we were returning to N07 from MJX VFR. I was in the front left seat, Jim Petrizzi was in the front right seat, and Skip Straut was in the last row right seat. On approach to Rwy 01 at N07 shortly before 5:00 PM, given a cross wind from the left, my visual focus as we crossed the runway threshold was on the runway centerline, with left wing down and some right rudder in. As we were in the flair maybe three-five feet above the runway, Jim Petrizzi suddenly grabbed the yoke and pulled up. I thought he was beginning a go-around. With a bit more airspeed than usual because of the windy condition, the nose rose, but immediately as it did we heard a loud thump. Jim said we hit a deer and must not go around, so we let the aircraft settle back onto the runway. The right wing dipped onto the ground. We came to a stop halfway down the runway.

When we exited, it was obvious that the deer had hit the right main fixed gear and caused it to separate from the aircraft. The main gear and the deer were down the runway near what should have been the touchdown point. I never saw the deer until I walked down the runway after exiting the aircraft. Jim Petrizzi said he had noticed it suddenly rise up from the grassy area to the right of Rwy 01 where it had gone unnoticed while it was laying down, and when he saw the deer rise up and start toward the runway, he grabbed the yoke in an attempt to fly over the deer.

James "Skip" Straut, who was in the right rear seat, said he never saw the deer as we were landing.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Possibly fencing around the entire airport perimeter(?). Not sure.

At dusk and at night, when traffic is minimal, a low pass over the runway is used by pilots at this airport to alert deer, but this is not used in daylight when traffic is greater and deer generally are not present. Even if this "low pass" technique were to be used, it presents its own hazards and may not be a reliable way to avert a deer impact with a deer that chooses to run toward the landing aircraft, as in this instance.
