Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft was destroyed upon impact to the ground. Wings were crumpled, propeller was bent/broken. Front landing gear was found a short distance away. Fuselage/wing parts were found in nearby trees. Several small apple trees were toppled/burned. Fuel tanks were ruptured and aircraft caught fire a short time after impact. One wing fuel tank exploded several minutes into the fire. Entire cabin area was burned out. All personal belongings were left inside the aircraft and were burned. A list can be provided if necessary.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departure from CL13 to KCRQ at 13:50 PDT. ATIS was received and copied from KPMD and KVCV to approximate weather prior to takeoff. Density altitude and W/B were computed to ensure operational limitations were not exceeded. Terrain was flat with fruit trees to the south and north of the west end of the runway. Hangars and a residence are present to the south of the runway at the east end, continuing to the middle of the runway. Runway 26 selected due to wind direction/speed. A standard soft field takeoff was attempted. Prior to the airplane entering ground effect, a bang was heard which may have been an engine failure but at the time was interpreted as a rock hitting the fuselage. The airplane entered ground effect, but would not build airspeed sufficient to pitch for Vy. Wind blew the airplane over the orchard area south of the runway and a safe abort could not be performed. I intentionally stalled the aircraft to lose airspeed prior to inevitable impact.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Aborted takeoff roll prior to entering ground effect after loud bang was heard.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The engine (Continental O-470-R / 83637-2-R) didn't seem to be producing enough power, as I have taken off in these conditions before without issue. I noticed, and several witnesses to the event indicated a loud bang sound during takeoff roll, which I attributed at the time to a rock hitting the fuselage. It may be that the engine experienced a problem during takeoff, causing it to be unable to deliver 100% power.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

Pilot logbook was destroyed in the resultant fire; time estimates are correct to the best of my recollection.
Wind speeds and wind directions were different at KPMD and KVCV; 300/5 at KPMD, light/variable at KVCV. Estimated wind speed/direction was 300 at 2-5 kts based on wind sock direction/size.
ARTCC says they didn't report an ELT activating during the timeframe of the incident; impact damage or fire may have disabled it. Additionally, I'm not sure of the TSO number for that particular ELT. It was installed in the late 70s and hasn't been changed.
The engine installed is a rebuilt engine; the date in the "engine manufacture date" field is the date the engine was purchased. The previous engine in the airplane suffered catastrophic damage.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
