Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

It is assumed that the aircraft was totaled for value purposes. Prop strike and wing damage. Insurance company (AIG) removed the aircraft from the site.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Removed aircraft from the hanger at approximately 2:30 pm. Called for weather briefing to Amarillo Automated weather at 806.335.1060. Winds were reported to be from 210 degrees at 12 kts. Conducted aircraft preflight check list. Taxied from my hanger position towards runway 23. Upon leaving T hanger area I noticed a Cessna 172 departing runway 17 and appeared to be struggling. My initial thought was that perhaps winds had changed and that runway 17 would be a better choice. I announced that I would taxi to 17. After I turned down taxiway towards 17, I observed the wind sock shift and it appeared to be indicating blowing from the West. I then announced and turned around to taxi to runway 23 as originally planned. When I arrived at 23 I called again for weather. I then performed my passenger briefing and run up procedure.

I announced and took the active with full power down runway. When my airspeed was live I rotated and flew straight down the runway. After leaving the runway and the airport property I felt that the aircraft was not producing enough lift. I considered returning to the airport but felt that I could not. I noticed that my stall warning light began to flicker as to indicate I was about to stall. I made the decision to land on some newly developed dirt roads in a housing sub-division located just Southwest of the airfield. The incident happened within seconds and I could only nose over to develop airspeed and kept my wings level. When I touched down on the dirt roadway the front gear struck a small dirt mound build up and collapsed. The aircraft came to an abrupt stop and the right wing dipped and was damaged during the skid.

I asked my passengers if everyone was OK and they both confirmed that they were uninjured. The passenger in the right seat opened the door lock and then door latch. I turned off the master, the ignition and removed the key and shut off the fuel. We exited the airplane; the right seat passenger, then the rear seat passenger and then the pilot. I then called 911 to report the incident. When the Texas highway patrol officer arrived he told me he would call the FAA when I informed him that I believed I was required to contact them.

The intended flight purpose was to stay under 4,800 feet to stay out of Class C airspace and depart to the south to observe Palo Duro Canyon and return to the departure airport.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This incident could have been prevented by not flying in the hot afternoon with an aircraft with full fuel tanks and at the upper limits of useful load. Density altitude also played a major part of the incident.

I could not find the Manufacturer and Model number of the ELT. The airplane was removed from the site and taken to the salvage yard in Dallas, Texas. The ELT was functioning and had a new battery installed and was tested in January of 2016.
