Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The aircraft lost the nose wheel, collapsed the right main gear and had a prop strike. There was some damage to the right wing. The aircraft hit an airport sign which was destroyed and also a runway light.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At 0800 EST I arrived at the flight school located at KHOW to begin my preflight. I checked the weather on aviationweather.gov and the METAR reported Calm winds. My instructor gave me approval based on the current weather conditions to begin my preflight for my second solo flight. This flight was designated for solo traffic pattern work.

At 0845 EST my preflight was completed with the current ATIS obtained and I was in the aircraft ready to taxi out to the runway for departure. I followed the items on the checklist as I would normally do and completed the run-up and pre-takeoff checklist. Everything was normal.

I contacted tower for departure at approximately 0900 EST. I was cleared for takeoff on runway 10R. This is the runway I used for my traffic pattern work. I had 4 solid landings without incident.

On my 5th landing, I was approaching the runway as normal. My approach speed was 65 KIAS and I was on centerline. As I touched down on the main gears, the nose swung to the right. I tried to correct for the swing by stepping on the left rudder. This is when I lost control of the aircraft and the aircraft came off the runway to the left. It hit an airport sign and a light before coming to a stop on the grass at the intersection of taxiway "M" and "E". At the time of the incident, tower reported the winds to be 190 at 04 kts.

After the aircraft stopped I made sure to secure the aircraft by turning the fuel selector to the off position, mixture full lean and magnetos and master to the off position. I exited the aircraft and walked away to the aft of the aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Further training and practice in rudder control and corsswind landings.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
