Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Broken tailwheel. Broken rudder. Broken propeller.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The flight was a local familiarization flight to introduce Pilot 2 (Michael Buck) to the aircraft. Weather was clear. The take-off, flight, and return to the airport were all normal. I made a normal 3-point landing on runway 12. A wind gust from the right crosswind started aircraft weathervaning to the right. I applied left rudder and differential brake correction but the aircraft swerved further to the right. Rather than attempt to keep the aircraft on the runway I allowed the aircraft to depart the right side of the runway under control and in a straight line. The aircraft tracked straight across the grass approximately 20 degrees to right of runway heading while decelerating. When aircraft began to roll up onto the parallel taxiway it further swerved to the right under braking. The aircraft groundlooped (turned approximately 90 degrees to the right) when the right main gear encountered a shallow drainage ditch. The aircraft came to rest heading approximately 300 degrees. The engine was then shut down and both occupants exited the aircraft to inspect the damage. The tailwheel was broken as was the lower portion of the rudder. One prop tip was broken and the other bent. (The propeller was wooden, not metal.) There was no property damage and relatively little damage to the airplane so the airplane was moved approximately 50' to its hangar.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Not sure how this could have been prevented. It appears that there may have been a partial malfunction of the brake system. See below.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

This has not been definitively confirmed but it appears that the co-pilot's (right seat) left brake master cylinder may have partially failed preventing normal application of the left brake by the pilot flying. This would account for the uncommanded turns to the right under braking.
