Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Nose gear folded under and broken off due to landing on uphill slope. One propeller blade bent. Hole in bottom of cabin area from nose gear. buckling present in cabin area.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Preflight occurred at 70J the morning of the flight in the hanger before fueling. We then proceeded to the fueling station. There was distraction due to the self-service pump not working, and the attendant assisted with getting it working, which included a phone call to the company and running our credit card inside his office. Both tanks were topped off with fuel. Due to the distraction, a second walk around/preflight was not properly completed, and the left wing tank fuel cap was obviously left lying on the wing. VFR Flight was initiated at 9am to KFGU to see Sharon's family, a trip that has been done frequently with this aircraft. We used GPS guidance with ADS-B receiver and weather receiver. No flight plan was filed. Radar services/flight following were not used. Transponder was on ALT and set to 1200.

Approximately one hour into the flight, about half way to the destination, the engine sputtered and quit. Altitude was approx 3000ft. Engine out procedures were followed, and an initial turn around to interstate 85 was performed. After observing bridges and thick traffic, the landfill was selected as our emergency landing area. It appeared to be a flat dirt surface. Once closer, it became apparent that the first part was sloped at about 30 degrees, and we did not have enough altitude to make it to the flat part. I applied full flaps and slowed the aircraft as much as possible. The stall horn was beeping just before touchdown, and I pulled back fully hoping to get the nose gear up to no avail. We landed nose gear first due to the slope.

Immediately after landing, I heard the ELT on 121.5. I verified that Sharon was visibly OK, and so was I. I then turned off the ELT and spoke on 121.5 that I had made an off airport landing south west of ATL airspace near I-85 and requested an ambulance for Sharon, since she is pregnant. A landfill worker walked up to us and reported that I was at the Hogansville Landfill. I reported my position on the radio, and that workers were on scene.

Sharon received a call on her phone from the attendant at Cairo airport (70J) moments after the landing. He was calling to let us know that he found a gas cap on the ramp that he thought might be ours.

Once emergency workers were on scene, they secured the aircraft using rope and blocks and removed Sharon. She had no visible injuries. Later, a bruise was seen on her right forearm, and small scrapes on her left knee. I had a 6mm cut on my lip from contact with the iPad mounted on the yoke. At the hospital, I got three stitches to my lip and was released, and Sharon was monitored for approx 36 hours to verify that the babies were OK. This consisted of an initial ultrasound, followed by two Bio-Physical Profile tests. All test showed normal conditions. She was released with no long term effects. After returning to Thomasville, Oscar Jackson, her OBGYN reviewed to test results and agreed that everything looked normal.

Sharon Patrick is the owner/operator of Shar Air, LLC- the entity that owns the aircraft. Since she is pregnant, John Clark was acting as PIC for the flight and responsible for proper fueling and pre-flight inspection.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Several mistakes were made by me, John Clark acting as the PIC:

1. Allowing distractions at fuel-up to stop me from finishing the job at hand.
2. Not performing a thorough final walk around after fueling.
3. Failing to maintain a constant check on fuel levels throughout the flight.
4. Leaving the fuel selector in "both" for the duration of the flight.

If any one of these were done to standard practice, the accident could have been avoided.
They should have ALL been done correctly.
