Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left main landing gear and left wing

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The aircraft owner was receiving proficiency training with his instructor including numerous crosswind landings during the 1.3 hour flight which began at 6:06 pm MDT at his home airport (KSUN). While performing the final main wheel touch down on runway 31, the aircraft weather vane left during gusty winds as the tail wheel was being lowered. The instructor took control of the aircraft but was unable to recover and the aircraft ground looped 270 degrees to its right. The left landing strut collapsed causing the left wingtip to strike the ground. The airplane remained upright and no propeller strike occurred. Neither occupant received any injury. The airplane was simply towed upright to its hangar.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Unfortunately, during crosswind landing practice the wind gusts simply got the best of two experienced pilots (which is what was being practiced to retain proficiency). Alternatively, landing on the unimproved, "east side safety area" might have been more forgiving, but the airport no longer permits such landings on grass areas.
