Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

One propeller blade bent from a prop strike, front and right landing gear collapsed and right wing caught under guardrail with the wing panel damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

When near 4G2, I had trouble visually locating it, but eventually did. I let Buffalo know I had the field in sight and got off Approach frequency about 7 miles from the field, but it turns out that what I had in sight was a road and not the runway. I kept flying toward Hamburg and announcing position and intention on CTAF. When I finally saw the runway I was on a left base at 1750ft (TPA), I pulled power and began a descent. I slowed the airplane to the white arc and lowered flaps, but noted the flight was high and fast. I forward slipped the airplane and bled off speed, but floated too long down the runway. I estimated the touchdown point with full flaps extended was between 1/2 and 3/4 down the runway. I thought about performing a go-around once airplane touched down but realized it was too late at that point and with the high density altitude (DA) decided not to perform a go-around. Unable to stop in time, the airplane traveled off the end of the runway onto grass, and through a ditch. Approaching a road ahead with a steep drop past it, I intentionally caused the airplane to veer to the left. The airplane came to rest upright with the right wing under a guardrail.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

- * An immediate go around as soon as airspeed and altitude was noted to be higher than needed for a stabilized approach on short final.
- * Looking at a satellite view of the field beforehand to get some nice visual checkpoints in helping spot the field. I planned an initial 45 entry to the downwind leg, but was thrown off by what I thought was the runway which turned out not to be.
- * Having a set go around point in mind, i.e. if wheels don't touch by first 1/3 of the runway, go around immediately.

I worked with a CFII a few days after the accident to do approaches into 4G2 and talked about the accident and factors leading up to it as well to drill in techniques, learn from this and help prevent occurrences in the future.
