Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The aircraft nose wheel collapsed causing damage to the firewall.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The day's flight was intended to be a sightseeing flight. There were two children, five and eight years old, in the backseat that were definitely providing some pilot distraction. The flight transitioned over Elmendorf air space at 2000 feet and was handed off to Bryant tower. At this time I was informed that runway 35/17 was not available due to UAS traffic and the longer taxiway Alpha was unavailable due to men and equipment. I then asked if taxiway bravo was available and was told that landing would be at my own risk and accepted. The approach was normal flown with 40° of flaps. Just as the flare was started, the last scan I remember of the instruments, the airspeed was at 60 MPH. The airplane will fly at 45 MPH given my previous experience in flying the aircraft. At that point, I detected the sink rate was higher than normal, and I went to advance the throttle to full. At this point, the aircraft made contact with the taxiway which caused a hard landing. The throttle was brought back to the idle position and we continued to the parking ramp. While taxiing off the taxiway and onto the ramp, I needed to turn, and that's when I figured out something mechanical had happened. The rudder controls were jammed from the nose gear impacting against the firewall. I had to use differential braking to steer the aircraft into parking position.

From the point where the aircraft contacted the taxiway there was a helicopter approximately 500 feet ahead of the airplane running. I now speculate that I may have gotten caught in it's wake, thus causing an atypical sink rate when landing.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Assertive statement to passengers to be quiet, isolated crew/passenger intercom, helicopter wake turbulence avoidance training or circling until the runway became available.
