Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing bent upwards approximately two feet inboard from wing tip. Left wing tip fairing damaged. Left aileron bent. Left stabilizer bent upwards, skin buckled. Left main landing gear strut bent, wheel and brake torn off. Damage to fuselage belly skin near left gear strut.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Time off approximately 1130 PST

Flight time was approximately 3 hours

Flight conditions were sky clear, winds out of the North West, light to moderate turbulence. Monitored onboard, real time weather information from an installed Garmin GDL69 and FIS-B from a Garmin GDL88 ADS-B

Approaching KHES, 15 nm out, obtained AWOS, which was reporting: Wind 310 at 6kts, visibility 9 miles, sky clear, temp 34c, dew point, 7c, altimeter 2982, density alt. 5200 ft

Monitored CTAF 122.7 and listened to another aircraft approach KEUL, enter downwind and land on rwy 30. Went back to AWOS for another check of conditions, then back to 122.7 for the rest of the flight.

We announced position 10 miles out, announced 5 nm out and flew overhead the airport and entered downwind, right traffic for runway 30. I looked for but did not see the wind sock. Abeam the numbers we set 10 deg of flaps and slowed to 80 kts. We turned base to set up a mile and a half final, setting another 10 deg of flaps maintaining 70 to 75 kts airspeed. The approach was stabilized and on a 3 deg glide slope. At that time I noticed I had to maintain a ten to fifteen degree crab angle to remain lined up with the runway centerline. I decided to land further up the runway, closer to a taxiway leading to the terminal, then slowed to 70 kts. I reasoned that since the wind had changed, I would not add any more flap and do a wheel landing at a higher speed which normally gives more control authority. Just before landing, I aligned the airplane with the centerline, touched down, but then started to slowly drift to the left. I felt that we were not slowing and still fairly light on the wheels. I attempted to correct but the left side of the runway was nearing and my control inputs developed a swerve I was not able to steer out of. We ground looped to the right. Fortunately the left main gear strut remained on the airplane and we came to a stop quickly, resting on that main and our left wing tip and part of the left rear stabilizer. The propeller did not strike the ground and I shut down the aircraft normally. All parts except the left main wheel remained intact. We exited the airplane without difficulty or injury at approximately 1535 MST.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Delay your flight home if you have had a stressful business meeting. Don't depend on others to give you a ride to the airport and expect to make the departure time. Pack your usual sandwiches and coffee, even if you are late getting to the airport. Eating and staying hydrated allows a pilot to perform better. If you have a long flight and the auto pilot quits thirty minutes in, think about turning back. Don't depend on the AWOS, get a visual on the wind sock. Don't just think about high density altitudes for takeoff performance, it affects landing ground speed also. Double check landing flap position. If you normally operate out of narrow runways, practice on some wide ones, as visual cues change. If you will sometimes fly with a heavier load, train with that weight so the handling characteristics will be familiar. If you fly a high performance tail dragger, fly more than once a week.

Individually, these items might be insignificant, but allow them all to influence a single flight and you will create serious problems for yourself, like I did.
