Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Propeller struck the turf at the side of the runway and is bent at both tips. Damage to engine and firewall, if any, is unknown, to be determined. Left main gear struck a runway light; gear fairing was dented; any damage to gear leg not apparent; to be determined. Leading edge of left horizontal stabilizer dented by flying debris; internal damage unknown, to be determined. Other damage: one runway light damaged; several prop divots in the grass beside the runway.		
Narrative History of Flight <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.		
(Note: the following is a verbatim transcript of the pilot's handwritten narrative. Transcription by Peter M. Bastien.)		
I arrived Martinsburg regional airport (KMRB) at 11:15 am on 08/30/2016 in order to complete solo outside the airport Winchester KOKV. As usually do, I completed pre-flight check list and my assigned flight instructor Mr. Peter Bastien logged me for solo outside the airport, which is Winchester (KOKV). As normally do, I went through the pre-flight checklist, taxied to runway 26 as KMRB Ground advised. Then, I took off runway 26 as KMRB tower advised at about 12:00-12:15 pm. I was heading to Winchester airport (KOKV), which is located 17 nm from KMRB airport. I reached cruising altitude 3000-3300 ft after I passed KMRB class D air space. During the journey, I experienced mild-moderate turbulence, and I was heading to south-West of KMRB airport. At about 7 nm to Winchester airport (KOKV), I switched 122.7 frequency, which is CTAF for KOKV airport, and requested travel advisories to the Winchester airport. Since I did not receive a response to the request, I managed to reach KOKV pattern altitude, which is 1700 MSL. Based on the weather forecast of KOKV airport, I know Runway 14 is the best choice for landing. After I reached pattern altitude, I managed to enter 45-degree angle on to the left downwind Runway 14. I picked my aiming point as 1000 ft beamer of the runway 14. Then I followed landing procedure at pattern (carburetor heat on, trim at 65 knots, 1st flap). At the base runway 14, I managed to keep airspeed 60-65 knots. While I descending there were mild turbulence happened. At the flare I gradually raised Aircraft nose in order to stall and land. I noticed I passed my aiming point little bit & air craft was ballooning little bit high. I added engine power and idled. Then, the aircraft bounced again and I could not control it. I felt third bounce. was little bit vibrated and the air craft was off the runway 14 to the left Grass area & stopped. Immediately I followed emergency procedure & exit the aircraft.		

Operator/Owner Safety Recommendation

Perhaps by increased indoctrination, training, and emphasis on better aeronautical decision-making; specifically, to abandon a poorly executed landing attempt without delay, and go around.

EVACUATION OF AIRCRAFT

Was an emergency evacuation of the aircraft performed? ☒ Yes ☐ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location

After performing the shut-down checklist, one occupant (the pilot) exited by unfastening his seat belt and shoulder harness, opening the door on the pilot's side, stepping out to the ground, and going upwind of the aircraft, as specified in his emergency checklist.
