Subject: Tower Questions
Date: Thursday, March 2, 2017 6:26:25 AM

The tower is currently used for internet and two way communications

The height of the tower structure when purchased by my client was in the mid 100 feet range. With the antenna attached, the tower was in the mid to upper 100 feet range. The exact measurement is not had at this time, but my client has a crew working close to the area and will have the exact measurement soon. This tower is well under 200 feet with the antenna included.

There has been no height change to said tower.

The tower is marked and lit appropriately per regulations

The tower is not registered, as it is not necessary.

Please contact for further questions,
