Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft rolled forwards over the nose, breaking off the nose wheel and rolling onto its roof

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

My Friend Trevor Haworth flew from Las Vegas North(KVGT) to Bishop (KBH) that morning where we had coffee, then I flew the leg from Bishop to Lake Tahoe(KTVL), departing at 11:35 Local arriving at about 13:30 Local.

We attempted to listen to ASOS to get the local weather and wind direction but were unable to get any response, so we listened to other aircraft landing into Tahoe and they were all landing on 18.

The weather briefing we had had that morning from WX Brief was perfect weather for the entire route with no hazards or advisories

I did a good approach into 18 at Tahoe with a downwind over the lake but ended up floating down runway, another pilot said the wind changed direction as I came over the threshold though I have no evidence of this, and by half way I had not touched down, so initiated a go around as we are all taught to do and went full power but the aircraft would not climb.

Though I did not realise at the time when doing my pre-landing checks I had turned on carb heat (almost by instinct because in the UK this is drummed into us) but I had forgotten on final to turn it off (this is probably because I mainly fly fuel injection models in the UK so did not have the instinct to turn it off) and at this high altitude when I initiated a go around there was no power to the engine. I only realised this had happened when I revisited the plane yesterday and saw the carb heat was on.

With full power and back pressure on the stick the aircraft was sinking and touched one wheel on the runway which was unexpected, and threw the aircraft off kilter, the rest is a blur of trying to put the nose down and level the wings to gain power but catching the nose wheel and turning over forwards on the grass.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I should have flown more often in the mountains with a carburettor engine aircraft. I should have added a extra check in my finals for carb heat closed, and practised more.
