Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to multiple parts including: propeller, cowling, both wings, fuselage behind baggage area, rudder, elevator, all landing gear torn off.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I had departed my home strip at 8:00 am with no rain/mist occurring at this point of time. weather forecast called for light rain/mist throughout the next few hours with no severe weather. I landed at KFBY (Fairbury, NE) at 8:10 and the mist started and continued over the next 1 1/2 hours. I departed KFBY at 9:50 enroute back to my home strip 12 nm away. I listened to KBIE awos as KFBY did not have an awos system to get the winds of 090 at 3 kts. KBIE is 15 nm away so i was sure to take note of my windsock at my strip. I did notice that my windsock was showing a slight wind from 150-160 and not a direct crosswind. I still made the choice to land on 36 as I do regularly if wind is not a factor. As I came in, I landed slightly long at the mid-point that I normally use as my go around point. I had mis-interpreted the small amount of rain that had come in the previous 1 1/2 hours thinking that it would have made my grass strip soft which was partly why I wanted to land 36 as my hanger is at the north end of 36. since the rain was so light, my strip was still very solid but the grass was slick. due to the slick grass, I could not get any stopping force from braking. after realizing that I was not slowing much, I made the decision to go full power and try to take off. I did not have enough runway length left to accomplish the takeoff. while I was just high enough to clear some 55 gal plastic barrels 300 feet north of the end of my strip, I was too close to an old grain dryer on the neighbors property. the grain dryer hit my right wing forcing me back to the ground.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

A bad decision was made to try to take again after the baulked landing. there was not enough runway left to get off the ground properly. future procedures and personal minimums need adjusted to move the landing zone further down to allow more runway ground roll on landing to allow proper distance even in wet/slick conditions. I also plan to work with the neighbor to move the farm equipment that would allow for a more clear path in the event of any type of low approach/takeoff in the future.
