Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to left wingtip and outboard portion of left aileron. Skin ablated off left edge of elevator due to ground loop. Prop strike with engine sudden stop due to aircraft tipping on its nose. Prop tips ablated due to scraping pavement. One prop tip slightly bent.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On the incident flight, the Stinson ATIS "Oscar" reported winds of 160 at 9 knots, 10 miles visibility, clear, altimeter 29.91. Final approach was flown with 2 notches of flaps at 80 MPH. Initial touchdown (wheel landing) was normal and exactly as the previous eight landings had been. I held the tail up as I'd been instructed for this airplane to maintain better directional control until the airspeed bled off to the point where the tail settled naturally. As the tail settled, I gradually came back on the stick to hold the tail down. At that point the aircraft began to drift to the right of centerline. I applied left rudder and the aircraft continued on a more severe right drift. I applied full left rudder at this time along with some left brake but the aircraft continued in its right turn which became more severe. At this point the aircraft came up on its left wheel, dragged the left wingtip on the pavement then came to an abrupt stop and nosed over in the "crotch" of pavement off the runway at the intersection of runway 14-32 and 09-27. At the time of the nose over, the engine was running, the prop struck the ground and the engine came to an abrupt stop.
