Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing to spar damaged, Left landing gear damaged, Propeller damaged, Vertical stabilizer damaged. Other property includes damage to approach lighting station, threshold lighting, and one one HIRL

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I took off with my student in N5673U about 30 minutes after sunset for an initial night flight to include some simulated IFR and review of VOR navigation. Following the end of that planned segment of training we returned to PKB for some night takeoffs and landing. During our second approach to landing we were high on the approach and following adjustments I commented that the airspeed was low (about 60 MPH). After turning my attention from the airspeed I recognized we were in a high sink rate and I took control of the airplane. I added full power and the engine responded however, the aircraft impacted the ground short of the runway threshold. After impact with ground I was able to reasonably control the airplane until it exited off the left side of the runway short of the aiming point markers. It came to rest about 30 feet off the left edge of the runway at which time I notified the tower we were off the runway. I then turned off fuel and shut down the master. I then turned on the avionics to call the tower to tell them we were okay but to send an airport truck which promptly responded.

All events and planned flight to take place at the Mid-Ohio Valley Regional airport.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Although I was talking/instructing throughout the evolution more emphatic pointing out for the need to correct the low airspeed situation and/or taking control of the aircraft a few seconds sooner would have prevented the accident.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
