NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On August 30th, 2016, I departed Cedar City Regional Airport at 0930 am in Cessna N734AV. I flew a cross country flight plan to Delta Municipal Airport (KDTA) After completing my pre landing checklist, and obtaining weather from the AWOS-3 127.75. I entered the traffic pattern on a left downwind for Runway 17 because other traffic was using runway 17 even though winds were 050 at 3 knots. I began my descent on final and as I approached runway 17, my airspeed was too fast. I landed on my nose tire first, causing a porpoise effect. I bounced back to my main tires. After my main tires hit, I then again hit my nose tire which caused a prop strike. I knew it was a hard landing, but did not hear the prop strike occur. I came to a complete stop and taxied back down the runway to take off. While running the aircraft up to full power, I did not notice any unusual noises or vibrations and continued for take off. After taking I flew to Filmore Airport. I did one go around in the traffic pattern and completed one landing. After landing in Filmore, I departed to the south and flew back to Cedar City. While en route to Cedar City, I noticed what I thought was turbulence and didn't think anything of it. Once I arrived in Cedar City, I entered a 5 mile final and completed two touch and goes with no problem. I then completed a third landing and a full stop. I taxied back to the hangar and completed normal shut-down procedures.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation This incident could have been prevented by performing a go around instead of attempting to land. It also could have been prevented by adding power and climbing out after making initial contact with the Runway.
