Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left main landing gear hit basketball size rock and folded outward resulting in damage to left wingtip, left strut, bottom of engine cowling, the tip of one prop blade, the horizontal stabilizer and the left side of the belly.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On the 21st of sept. 2016 we were planning to depart bennett airstrip but we had to delay because of heavy winds, we waited out the day watching the weather getting weather updates from my wife on the inreach satellite unit. At approximately 16:00 the winds died down from 30+ knots down to approx. 10 knots from up river. We watched weather for another hour or so and it was staying fairly consistent. We then decided to get ready to go. At approximately 17:25 we started the plane and while it was warming up we were watching the wind on the ribbon that was placed at different locations. We taxied to the down river end of runway and that ribbon confirmed that we were taking off with a headwind. I ran up to full power and everything looked good. I calculated that with the weight and wind that we would lift off at 700' and we did. We lifted off and went up about 8' then it felt like we lost our lift. There was not enough runway to set back down and we had to clear a little cut bank that was past the end of runway with some brush on it. We were at full power extreme edge of stall to clear the cut bank and still settling back down. After that was cleared there was a short sandy/gravel sand bar so I put the airplane down on that. Unfortunately the nice sand and gravel ran out and we rolled into some rocks that were basketball size and a little bigger. That is when the left main wheel hit a rock and folded the left gear up to the left strut which resulted in the damage to left wing, left strut, nose cowl, belly and prop. After we got out of airplane we noticed the wind reversed direction and was going down river about 8-10kts.
