Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right main landing gear broke off, numerous dents and scratched to the right wing and wing tip, slight dent and scratches to the right elevator, pitot broken off.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At approximately 0600 I reviewed the Weather (National Weather Service) at Carson City Nevada. The sky was clear and Calm, the forecast was winds light and variable until 1000. At approximately 0630 I conducted a complete pre-flight check in accordance with the Bristell Checklist. No issues were noted. At approximately 0645 I departed Dayton Airpark (Runway 23) with my friend (passenger) Ken Nussear. We climbed to 7000' heading west to Carson City, we then turned north to the Washoe Valley and over Washoe Lake we turned back to the South and headed to Minden-Tahoe Airport where I intended to do three (3) touch and go landings. Upon arriving at Minden-Tahoe Airport I leveled at pattern altitude (5700) flew a Downwind, Base and Final approach to Runway 34; completed the touch and go landing with no issues. I then climbed back to pattern altitude in a crosswind closed pattern (staying in the pattern). I then flew a second Downwind, Base and Final approach to Runway 34; upon touching down on the runway I was left of the centerline as I was slowing the plane down (throttle off) I attempted to correct the plane to the centerline and apparently over-corrected to the right of the centerline, then swerved back left crossing the centerline and finally swerved back to the right when the aircraft began to skid to the Left and slow almost to a stop at the adjoining taxiway, at this point the right main landing gear (wheel and strut) broke causing the right wing to drop down on to the taxiway causing the following damage: Right main landing gear to break off, numerous dents and scratched to the right wing and wing tip, slight dent and scratches to the right elevator, pitot broken off. Upon exiting the airplane my passenger (Ken) and I were assisted by airport Maintenance Staff Mike Harbison in putting a dolly under the right wing and pushing the aircraft off the taxiway and parking it at a tie-down. I then complete an incident report and gave it to Mike Habison.

I then contacted Ken Steiner of USAIG insurance. I have also contacted John Rathmell [REDACTED] of Bristell USA to work out a repair plan. I have met with FAA Aviation Safety Inspector Donald Morgan 09-28-2016 and completed FAA Form 8020-23.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I should have stayed left of the centerline and took-off or simply continued to slow the aircraft to a stop prior to making nose-wheel turn corrections.
