NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I had the plane booked for 9am, but decided to go earlier because I was excited about getting my long cross country completed. When I got there, the plane was being used, which I was happy about because I had planning to do anyway. Initially, I was going to try to include Plattsburgh in my route, I decided to plan something not so far away and more in line with the requirements. So I decided on OXC-PSF-SWF-OXC. It was more than 150nm, and had 2-50nm+ legs. I went to aviationweather.gov and took a look at the METARs. Everything was looking great for VFR. I then filled out a copy of a FAA flight plan to prepare for a call to the weather briefer. Once I had all the required information, I made a call to 800-WXBRIEF for a standard weather briefing. The call went well. The briefer did mention a turbulence warning for the Northeast. He did take the time to find pilot reports from the general area I would be flying. The reports said turbulence wasn't an issue for them. The briefer gave me all the info, and he was confident, as was I, that this was a great day for this flight. After the call, I continued my planning by charting the course on my NY sectional, marking my checkpoints, calculating distances, etc. everything was looking pretty good. I was just checking my numbers again and my CFI Ryan Mizaguchi came into the pilots lounge to see how I was doing. I went over the info from the briefer, my charts, checkpoints, etc. We had discussed whether or not I had the best checkpoints, as I was relying heavily on 2 wind turbines on the way from OXC to PSF. Ryan reviewed my docs, cert, license, and then endorsed my log book for the flight. I spent a few more minutes making sure I had all my frequencies, airport information, and another look at some numbers. I was good to go. I grabbed a coke from the machine, the tin from the office, and headed out to preflight the plane. I confirmed the plane was just topped off as Ryan told me as I passed the front desk. I noticed the plane was not tied down, chalks only, but this made sense since it was just flown and they knew I was going on this flight. Preflight was normal. Everything looked good. Sumped the fuel, oil was good, tires good, and the walk around was looking good. Got in the plane, and started with my checklists. Got all my charts readily available, and made sure my freq sheet was right by my side. I called ground and got clearance to taxi via Alpha to 36. I taxied to run up, did my checklist, and called tower for clearance. Got my clearance for a northbound departure, pulled on the runway, and took off. Everything was good and going as expected. I climbed to 3500 feet trying to keep at 80kts during the climb. Once I reached top of climb, I leveled off, moved the throttle to 2300 RPM, trimmed the plane and got ready to find my next checkpoint. I was very happy to see the wind turbines already and I remember this made me very happy. This meant I could ensure I was on track the entire leg. As I approached the 2 turbines, I was right on track for Pittsfield and was feeling good. I could see the valley and was expecting to see Pittsfield very shortly. The mountains on the south of Pittsfield hide the airport so I was a little anxious approaching as I was hoping I would be able to physically see the airport before I started my descent. Since 26 is a right pattern I was going to enter the pattern at a 45 deg to the right downwind. I was tuned in to the ASOS for PSF and everything was just as expected, basically the same info from the weather briefer and preflight planning. 320@8. I tuned into the PSF traffic and was stating my intentions. A jet was on the run up for 26. We basically were talking back and forth and he let me know he was ready to takeoff. I decided to extend my downwind to ensure he had time to go. I slowed down to flap zone, added some flaps, and turned base. The jet was gone, so I felt good about that, added more flaps and turned final. I felt really good at this point. I put in the rest of my flaps. I applied right aileron and left rudder for the crosswind. I remember being really happy about the approach. OXC has trees right before the runway, so having this field in front of 26 made me really happy. I was coming over the numbers, about 20 feet or so and transitioning for the landing, when I was hit by a significant wind force. It really knocked the plane, and freaked me out, so I decided to not take any chance and go around. I immediately pushed the throttle all the way in, and started my flaps up. It was really bumpy, I was at a pretty steep angle and the stall horn was really going crazy. I tried to avoid a stall and I lowered the nose a little bit to try and keep it from stalling. After lowering the nose a little bit, the plane touched down very unexpectedly. The plane was turned and off the runway now, on the grass bumping all over the place. I pulled out the throttle and was pushing hard on the brakes. It was not slowing down. I remember seeing a ditch, pulling out the mixture, and bracing for impact. Things are not going well at this point. I felt my head, it was wet. When I wiped my hand and held it in front of me, it was covered in blood. Blood was everywhere. I pulled out my cell phone and called my instructor. Then I saw a guy pull up in a four wheeler. He was telling me to get out of the plane. I realized my ankle was messed up and I could not put any weight on it. I shut off the master switch and started out of the plane, which was leaking fuel. Being a big guy, I had to crawl some of the way to get clear of the wreckage. I could hear sirens. They then cut off my clothes, put me in an ambulance, and took me to Berkshire Medical Center.
