Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Both wings are damaged by fence post strikes. Propeller blades are broken from the hub and bent back. Firewall forward systems are damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

IFR flight from JMS to 49B filed with FSS and departed JMS about 11:15AM CT with my daughter Sydney, a pre-solo student pilot with 13 hours of logged time. Clear weather departure and 8,000 msl cruise. Encountered IFR condition at Dupree with cloud tops at 8,000 msl. Minn Ctr approved request for 10,000 msl. Minn Ctr canceled radar services 50 miles from 49B and instructed me to pick up Ellsworth Approach radar services 30 miles from 49B.

I requested and received radar services from Ellsworth Approach 33 miles from 49B. I requested and received approval for the 49B RNAV GPS RWY 29 approach. I attempted to raise the AWOS at 49B, but it was garbled by Wall, SD AWOS. I used RAP altimeter setting. I used my cell phone to text the 49B FBO for an approximate ceiling. Approximately 500 ft ceilings were reported.

I set the autopilot to the approach setting and crossed the IAF at or above 7,000 msl. I entered the clouds at 6,000 msl.

I attempted to raise the AWOS at 49B for the local altimeter setting and was still garbled by Wall, SD AWOS. At 5,200 msl, I intercepted the glide slope and raised the AWOS for 49B and received the local altimeter setting. I left the autopilot engaged for the approach.

I asked Sydney to inform me when the runway becomes visible. I encountered light ice at 4,700 msl. I kept the needles centered to DA of 3,530 msl. Sydney stated the runway was in front of us. I looked up from the instruments and did not see the runway. Sydney then stated that we were above the runway. I looked out the side window and still did not see it. I returned to the instruments and noted my airspeed was stable at 120 and the wings were level. I referred to the altimeter and was unable to determine my altitude. Sydney asked why we were not landing. I stated that I did not know where we were anymore. Sydney then stated the runway was to my left.

I went full throttle and began to climb. At that moment, my right wing struck a pole. It was unknown to me where this was on the airport or otherwise. I immediately pitched down, held the ailerons neutral and used sever rudder movements to keep the wings level as possible. There was a sever left bank tendency. I did not recognize the area I was aimed at.

Just before impact, I yelled to brace and we both crossed our arms in front of our faces and pulled our feet back from the rudders. We were both awake and aware after impact.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

When the runway was not visible to the PIC at DA, an immediate missed approach should have been executed. Excessive head movement should be avoided at all times during the transition from IMC to VMC.
