Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Pilot windscreen exploded/shattered in flight

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was flying(right seat) in 155NR with biologist Steve Cordts. Our biologists act as crew-members, and are trained to assist in hazard avoidance. The left seat flight controls are removed for these wildlife flights. We departed KSTC trying to return to KBRD, and were in level cruise flight at approx 2200' msl, with the 2 front doors removed. Weather had turned bad earlier than forecasted, and we had left KAXN earlier than planned, and flew to KSTC to avoid, and wait out the weather. After nearly 2hrs of waiting and watching weather, we decided to fly to KBRD. There had been a thunderstorm passed thru the Brainerd area, and more were forecast to develop around 1630L. We could see the activity on numerous weather sites.

We departed approx 1325L, and our flight was smooth. We could see light rain farther up ahead, and both commented on a large cloud moving thru the area. I had been at about 80psi TQ(max cruise was 81), and we were indicating about 115mph, and ground speed of 128.

At approx 20mi south of KBRD, it began to feel a little bumpy, so I slowed down a bit to 76psi TQ, and about 110mph. We were cruising comfortably. I had certainly flown in much worse wind in May during parts of the sandhill crane survey. It had started to rain lightly.

Suddenly with no warning, the pilot windscreen exploded/shattered. I felt things hitting me, I sort of crouched down slightly, and things were flying loose all over the cockpit, some out the door. The nose tucked immediately, and I instinctively started lowering the collective, not really sure what had happened. We dropped about 800'. I could hear that the engine was still operating, so I continued my crosscheck again. Everything was normal, temps, pressure were good. I started to fly along state hwy 25, thinking about landing somewhere, but there were no good areas. We had descended to approx 200"AGL. We were unable to communicate with each other except by yelling. Steve had thought I had become unresponsive, as he saw me partially slumped over. I assured him I was o.k., but had something on my face. He told me I had a small cut on the side of my nose. I discovered after landing that my flex mic boom had been bent completely around the left side of my helmet. I had slowed to about 50-60mph, and could maintain control of the aircraft fairly well.

We originally had only 11 minutes left to get to KBRD from this point. I momentarily thought about flying the rest of the way, but then realized at 50mph, it would take at least another 20 min, and not being able to make radio calls was not good. I also wondered if more had been damaged by the flying plexiglass, etc. I decide to land at a familiar spot just off the hwy about 13.5mi south of KBRD. Shutdown was normal.

Post-flight inspections revealed no evidence of a birdstrike. No residue, parts, feathers, nothing to indicate a wildlife strike. The damage on the horizontal T tail shows nicks and cuts from something sharp and narrow. Inspection of my orange inflatable survival vest showed that all the pockets had remained closed, velcro had done it's job, no items were lost.

No aircraft limitations were exceeded at any time. Cruise indications were as follows: TQ -76psi, TOT -716degrees, N2 -103%, N1 -98.5%, oil press -130psi, oil temp- 60degrees, OAT -24degreesC.
