NOTAMS (D and FDC), AIRMETs, SIGMETs, PIREPs in effect at the time of the accident/incident:

None Affecting VFR Flight

Around 9:00AM on the morning of October 3RD, I visited the web sites for NOTAMS for CONCORD and LACONIA airports. The TFR site for the New Hampshire area and the Aviation Weather site for the ceiling, visibility and wind data. I drove to the Laconia airport, about a 45 minute drive. I completed an insurance questionnaire that I had to submit looking at data in the logbooks. I pushed the airplane out of the hangar and began preflighting the airplane. It was now 10:15AM.

After my wife and I seat belted ourselves in I started the engine, taxied to the run-up area, performed the normal pre-takeoff checklist and departed runway 26 at Laconia. The wind was calm and the weather VFR. I flew North over Lake Winnepausakee to enjoy the foliage at 3000 feet. My wife loves the view from 2000 feet. After about 10 minutes of sightseeing I turned south over the Belknap Mountains towards Concord, NH.

At about 10:45AM, I listened to the Concord ASOS. The weather was calm with a few scattered clouds at 1000 feet. My observation was that the few clouds were all south of the airport. I left 3000 feet for the traffic pattern altitude and entered on the downwind to 35(calm wind runway), I slowed the airplane to 85 MPH and applied 45 degrees of flaps. I did a pre-landing checklist, turned base and final announcing my position and intent the land.

11:00AM, touchdown was normal, but two seconds later, I lost directional control towards the East side of the runway. I applied full left rudder and brake to stop the turn, to no avail. The resulting ground loop ended approximately 50 feet from the runway edge, 180 degrees from the where I started. Don't believe there were any mechanical issues.

After the aircraft came to a stop, I turned off all electrical power and shut the fuel off. No serious injuries occurred. We exited the aircraft and examined the physical damage. Within several minutes I saw the airport vehicles coming down the taxiway

The left wheel strut broke about 2 feet above the wheel. The left wing contacted the ground and bent the wing outboard of the lift strut. The propeller contacted the ground bending the two blades about 8 inches from the tips. There were numerous wrinkles in the belly of the fuselage.
