Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Wing strike of a sign. Plane slid on grass sideways and at idle fiberglass gear snapped off and there was a prop strike of the composite propeller.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I had loaded the airplane at Command Aviation with groceries that I bought at Costco. I had already checked Weather with the Aeroweather app on my phone and the NOAA Wx app as well. All good for flight. Loaded groceries in pax seat for weight considerations and well within weight and balance for aircraft with full fuel.

Normal pre flight of aircraft and checklist completed for taxi. Got the current ATIS and talked to tower and was given clearance for taxi to E intersection for a north bound runway 34 departure. Proper run-up was completed and flight checklist completed with no anomalies. Called tower for take off clearance and was cleared for take off NW bound for Point Roberts.

Lined up on runway and applied full power. I knew that there was a crosswind of about 15 kts. As plane gained speed I was applying full right rudder to keep plane straight but felt I was still drifting left. At this point I went to lift heels off the floor to get to right brake to assist in keeping straight and foot slipped a bit getting to top of pedal. Plane took a sharp turn left into wind and I was at the runway edge I applied right aileron and tried to get the plane in the air. I should have aborted when I needed brake to try and get plane straight again. I thought I would get it airborne before the runway edge but could not and then pulled the power but could not avoid the sign at the edge of the runway. I hit the large "2" sign with the right wing and it spun me 90 deg so I was essentially sliding on my left gear. I am not sure which gear snapped off first but believe that it was the left fiberglass gear that snapped off and the right gear also parted which is when the prop hit the ground with power already pulled. It did stop the engine. I came to a stop pretty quickly after that. I estimate it was a 100 ft from the sign.

I turned off all switches in cockpit and mags and got out of plane. Pretty unhappy but unhurt and walked around plane. I had not seen any trucks rolling and thought that I should talk to tower as to confirm they knew that I was okay and an incident had taken place. It was at this time that I smelled fuel and again turned off master and stayed away from plane. BLI OPS personnel and Fire Rescue Personnel also arrived.

Statement of facts evening Oct 5 2016 at 1830 local when back in Point Roberts as best I remember them.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I should have pulled power as soon as I was having problem keeping the airplane straight in the crosswind. The Glasair 1 had a known issue with a small rudder that made control on takeoff very technique driven. A larger ruddier was designed and most builders incorporated this right away. Mine wine a very early model Glasair and still had the small rudder. As fate would have it I was one week away from completing my large rudder and installing it.
