NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Before taking off, I reviewed all aspects of the flight, including departure and arrival airport information, and weather calculations were made. Weather was a standard weather briefing through Lockheed Martin WX briefing. Flight was direct from KMBT->5R2. Flight was insignificant with no issues. I conducted VFR flight using flight following for the duration of the flight. Mobile was the last controller I talked to. Mobile suggested that I stayed with them until clearing Vancleave towers. Once cleared of the towers, Mobile approved frequency change and squawked VFR. I had the field in sight and the weather from Trent Lott airport, since there was no local weather available at 5R2. Based on the direction of the winds, and wind sock observations, I decided to use runway 36. I decided to first do a low pass to familiarize myself with the pattern and the runway. Performing the low pass, I did not experience any adverse weather conditions or cross winds. Once I did the low pass, I decided to extend my final to give me time to set myself up for a safe and stable landing. I experienced no turbulent effects in the pattern. I aligned myself up with the runway centerline markings, I used 20 degrees flaps, my glide angle was good, and airspeed was normal operating approach speed of 70, as recommended on my checklist. I cleared the tree obstruction located directly south of runway 36 and started reducing my airspeed. Immediately after doing so the aircraft was pushed violently and unexpectedly to the right. Immediately, using my rudders, using ailerons to turn into the wind and giving the aircraft power simultaneously, I corrected for the abrupt wind change. Despite my best efforts to gain control of the aircraft, the aircraft was not responsive to my input on the controls. In a matter of seconds the aircraft was pushed into the trees to the right of the runway. The aircraft struck several trees and landed nose first into the runway area. There were no major injuries to the passenger nor the pilot, and both of us were able to walk away with no need for medical attention.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I would have chosen a larger airport. From the time the wind hit me, I did not have the space or time for the airplane to respond accordingly. I did an initial low pass to gain a feel of the airport. I felt no need at the moment in flight to make a decision to go elsewhere. The airport was relatively small, and with the tree obstruction and the tree line being so close to the runway, I now think that there is greater safety in a larger airfield. If I have an option, I will now choose the larger airport. I did not observe a crosswind with the windsock, and had I observed one, I would have gone to a larger airport. I would have chose an airport with more tree clearance as well.
