Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Collapsed both main gear and skewed tail wheel, bent left wing, tore off right wing tip, bent prop, Wrinkle in upper fuselage forward of tail, engine cowling bent Fuselage tubing bent at bottom of left door, right gear shock strut came through right floorboard in front of stick, standby alternator broke off at mounting to engine,

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed KLIC (Limon, CO) about 1230 local for Calhan Airport (5V4). I had previously done 4 Touch and Goes at Calhan at approximately 0940 local time and then flew to KLIC.

Terrain and runway are level with the exception of a high hill with trees with and a house about 1500ft-2000ft down the runway and 50 to 100 yards to the left. A county road parallels runway 17 to the West of the runway about 20 yards to the west. There is a ditch that borders the road between the runway and the road.

I over flew the field to be sure of winds which were from approximately 170 degrees and about 15 knots (down the runway). I flew a left hand pattern from traffic pattern altitude (7250 ft). Turned base normally and accomplished a normal landing with the intent of doing a touch and go. The first 1200 ft. of the runway is astroturf. I was still on the astroturf when I began applying power for the takeoff. I started to drift left and applied right aileron and left rudder. As I accelerated I began drifting further left until I departed the runway to the left onto the grass which is fairly level with the runway. My speed was about 60 mph at that point and felt I could fly out of the situation as the terrain was fairly level. However I realized I was approaching the hill with trees and house to quickly and would not clear the trees. I then applied right rudder to avoid that problem and turned 90 degrees to the runway but continued into a skid to a heading which was generally North, but skidding to the West. I continued the skid and crossed the runway. I hit the ditch skidding to the left and the left gear collapsed followed by the right gear as I skidded to a stop on the west side of the runway facing about 020 degrees.

I now believe that the wind may have circled around the hill and created a strong left quartering headwind and exacerbated my drift and was unable to keep the plane on the runway.
