

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Carrollton State: GA

ZIP: 30119 Country: _____

Latitude: 33.5620438 Longitude: -85.06085833

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 10/20/2016 Local Time: 11:10
mm/dd/yyyy

Time Zone: EDT

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☐ None

AIRCRAFT INFORMATION

Registration Number: N601UK

Manufacturer: Ted Smith

Model: Aerostar 601P

Serial Number: 61P-0183-012

Year of Manufacture: 1974

Amateur-Built: ☐ Yes ☐ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 6000 lbs

Weight at Time of Accident/Incident: 4750 lbs

Number of Seats: 6 Flight Crew Seats: _____

Cabin Crew Seats: _____ Passenger Seats: _____

Number of Engines: _____

Category of Aircraft

- ☒ Airplane

☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft was landed off-field in a grassy median of a local highway. Landing gear collapsed, punching holes through the topskins of both wings. Right wing twisted inboard of the nacelle. Fuselage structural failure at the aft pressure bulkhead. No property damage beyond the aircraft.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Aircraft was being repositioned for fuel; fuel quantities were low but expected fuel onboard was approx. 55 gallons as per totalizer. The fuel gauges read low but not zero. This particular model has a very thin wing with a wide and shallow fuel plane, the fuel caps are at the wingtips where the tank is only 2" deep, and it is not feasible to measure fuel quantity with a stick or other such external measuring device. Additionally, due to the nature of the fuel tank design, a slight deviation from wings-level position while fueling the aircraft can result in substantial differences in the full-fuel capacity, as much as 20 gallons or possibly more. Total flight distance was approx. 50nm, and should have been approx 20 minutes flight time, and apparent fuel quantity should have been sufficient, if not for the totalizer disparity. Departed KHMP from rwy 24 approx 10:41 EDT and turned westbound on course toward KCTJ, cruising at an altitude of 2500' for Class B airspace avoidance. After making a radio call to KCTJ's unicom frequency announcing 12 miles southeast and inbound for a 45 degree pattern entry for rwy 17, the engines began to surge alternately and I noticed fuel flows on the totalizer reporting 0.0 left and 3.4 right. I switched to 121.5 to radio a mayday call and report a position, and attempted to line up to land on a sizable road. The sink rate was such that I would not make my intended landing point, so I deviated to land on a closer road which wasn't quite as straight and unobstructed. Approx 600' agl I deployed landing gear and flaps and prepared to land in the median of the highway to avoid cars. The airplane was quite draggy and slow, and I didn't have enough energy for a gentle roundout, impacting on the main gear at a pretty high sink rate. The gear collapsed and the airplane skidded to a stop approx 250 yards from the first touchdown point, and the aircraft fuselage had rotated 90 degrees to the right of the flight path, but stayed entirely within the median. No cars, persons, property, road signs, wires, or anything else were damaged on the ground beyond a dirty scuff mark in the grass where the aircraft slid.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The Aerostar's fuel system is unconventional compared to most light twins, and it is difficult to accurately ascertain the quantity of fuel aboard. The sensitivity of the fuel capacity to the aircraft being laterally out of level can lead to disparities between the original equipment fuel quantity indicators, which are often considered to be less than perfectly reliable, and fuel totalizers, which are often considered more accurate and trustworthy.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
