Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Nose wheel, right main landing gear, right wing and propeller.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

It was a nice afternoon to fly. I flew to a control tower with a long runway to practice engine loss of power on landings and takeoffs. After about my 5th approach, I reached the runway high and aborted the landing for straight and level flight along the upwind. I was thinking of practicing a no flaps landing. This would require landing and taxing back. I wanted to know what time it was. I looked over to the other seat for my phone and did not see it. I reached down by and behind the seats feeling and looking for it. I must have been pulling on the yoke at the same time and not recognizing the back pressure. I did not think I had my eyes inside the cockpit very long. However, when I looked up, the first thing I noticed was the yawing to the right. I don't remember after that, but it had stalled and landed on the nose and right wing.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Simply by maintaining a sterile cockpit in the airport environment during landing and close to the ground. Previous to the flight I had completed a 50 mile bike ride, which is not that far for a bike rider. However, the slightest fatigue could hinder awareness and perception of time distracted. That may have been a contributing factor.
