Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left outer 1/3 wing contact with small cedar tree damage, prop three blade damage with sudden engine stop, nose-left main gear did not collapse, right gear on rotation of tree collapse. Possible stabilator rear-bulk head damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 10/15/2016 departed from KMKO VFR and landed H 68 without incident crosswind present. Picked up a fellow private pilot based on H 68 departed with weather reporting on board. Acquired Flight following VFR H68 to KBBG at 7500 ft. Landed without incident and mild cross wind noted. Within 24 hours return flight on 10/16/2016 from KBBG to H68 with Flight Following. Contacted Tulsa Approach released VFR 1200 with airport H 68 in sight. On final, gear-down, full flaps and 80 knots wind gust noted coming over the lake Gibson crabbing into the wind on touchdown on 18 moving forward when we experience a strong wind gust from West to East pushing us off the center line into the parallel grass patch not mowed. The aircraft moved forward until the left outer wing came in contact with a small cedar tree embedding into the leading edge without giving away resulting in the aircraft rotating 180 degrees into the thicket causing a sudden prop-engine stop. PIC trained and landed numerous times at H 68, comment from accompanying fellow pilot felt the crosswind gust extreme could not be off set on landing. Air bags did not deploy, no injuries occurred as we shut the aircraft down and exited safely.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Preventions is always easy looking backward after the event. First I must say I landed under the same conditions on October 15, 2016, picked up my passenger friend and departed without incident acknowledging a windy day not outside the aircraft crosswind ability. On my return to H 68 the following day I felt confident the same results would occur.

If I had chosen to turn to KMKO my own base rather than H 68 24 miles south with 7,800 runway and 150 feet width it would have resulted in a more controlled landing with greater width in steering for any crosswind.

Apparently H 68 had been an issue on other aircraft landing the base of 18 is low sloping upward to 35. The wind comes from the West crossing the runway into the East where there are trees between the runway and the lake causing a wind sheer upward on a gusty windy day.

I suspect I landed longer into the 18 by- passing this junction at 18 base on the 15th day, subsequently did not get the impact we did on return to H 68, day 16.

Fortunately no one was hurt on the landing as we walked away from the scene. It's all about decision making and action taken when they become adverse. There were fleeting moments of secondary thoughts on noticing what was happening but staying on the ground was the only option for safety.
