

student pilot name : RAKAN SAAD N ALSAIL

Date :10/18/2016

certificate number : XXXXXXXXXX

on 10/17/2016 i was going to have my solo x country to IMM airport and in that day i have done the checklist from the time i was in the ramp 17 until i reached the runway which was runway 9L at that time i did the runup and everything worked fine at that time so i contacted ground to tell them that the runup is completed and i was ready for takeoff so they told to monitar tower on 118.9 so i did and when i got the premission i went to the runway and i alined the aircraft with the center line and i give the aircraft full power to take off until the airspeed reached 50 i tried to takeoff but it wouldnt so i tried at 65 and when i saw the aircraft couldnt takeoff i immediately cut the power fully then i hold the brakes and pulled the yaw to the back to stop the aircraft and all sudden the aircraft went to the left and at that time the wind was calm so no wind correction was needed so i tried my best to stop the aircraft but it wouldn't responed and it went through the grass into the lake .
