NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

It was a practice and currency day of flying after one month flying hiatus. After checking WX (CAVU VMC all along route) on line and on Foreflight, I took off at 11:25 AM from KPAO (home airport) to KHAF - on way picking up ASOS WX, contacted traffic at HAF (uncontrolled field) where there were two other aircraft in patten, and executed 5 good landings - 3 full stop, 2 touch and go and Half Moon Bay. Landings were safe, approaches were stabilized and my confidence was building.

I thereupon headed back home to KPAO under flight following from KHAF, checked ATIS (Q @ 1932Z) then when instructed by approach control I contacted KPAO tower, who instructed me to join left traffic pattern (1000') for RWY 31. Base turn may have been a little early for 1000' (rather than the 800' on bay side to which I am accustomed.) Final approach was subsequently high and fast (80 kts rather than 65-70kts), rather than execute a balked landing and go-around I executed a straight-ahead slip to reduce altitude. I was still fast (80 kts) and the winds were light, I decided I could make a good landing, though not completely stabilized. However, I touched down hard, bounced on landing, applied power to cushion bounce, then second touchdown landed flat, resulting in collapsed nose gear, prop bent, wind from the east caused ground loop dragging left wingtip as airplane came to halt on right edge of RWY 31 about 500' from Departure End. I should have executed a go-around as soon as I realized I was not on a stabilized approach.

Damage: Left Wing tip (resulting from ground loop after hard arrival from bounce), nose gear collapsed, prop dug in, bending prop.

I have already set up time to practice landings in same type airplane with West valley Flying Club Safety Officer, and will continue to train with him until we both feel I have completely learned the lessons of this hard landing.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I should have performed a balked landing and go-around as soon as i noticed i was not on a stabilized approach. Once i committed to the landing i should have reduced my approach speed to 70 kts from 80. When I noticed i bounced I should have Applied full throttle to effect a touch and go and proceed to enter traffic pattern for another attempt.
