Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Nose Gear collapse. Bent props. Nose cone and skin crumpling.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On November 5, 2016, at approximately 0730 EST, I arrived at KAZE, the home base of the above referenced aircraft. I conducted a preflight inspection and briefing via my IPAD/Foreflight. I noted the external fuel gauges to read 60+ gallons of fuel per wing. The aircraft and the noted occupants departed KAZE enroute to KCAE airport at approximately 0800 EST. The flight was conditions were VMC but conducted under an IFR flight plan. The flight was uneventful and concluded with a visual approach and landing at KCAE at approximately 0900 EST. The occupants conducted personal business in the local area until approximately 1430 EST. Again I conducted a preflight inspection and briefing via Foreflight for a flight between KCAE and 4J5. I noted the external fuel tanks to read 60 gallons per wing. The flight departed KCAE at approximately 1529 EST. Taxi, takeoff, climb and cruise were all uneventful. However, after decent from cruising altitude of 7000MSL and leveling at 3000MSL the instrument fuel gauges moved to a reading of between 1/2 and 3/4 fuel to empty. Subsequently within 4-5 min the right engine began running very rough. Upon enriching the mixture and activating the auxiliary fuel pump the right engine failed and the left simultaneously began losing power. I immediately feathered the right engine and asked my passenger to begin reading the emergency single engine checklist. I then declared an emergency and requested vectors to the nearest airport and began my turn toward those vectors. During the turn, the left engine failed. I feathered the left engine, asked my passenger to read the dual engine failure checklist, pitched the aircraft for best glide speed and located the nearest suitable landing location. Once I had assured the ability to make my intended landing location, I deployed the landing gear and wing flap. Upon touch down it became apparent that a turn to the right would be necessary to avoid a barbed wire fence and grain bins, that were located at the end of the field, in which I had landed. I attempted to use slight differential braking and aileron control to turn the aircraft, but maintain contact with the surface. The initial touch down and roll out had been aligned with the crop rows of the field, however during the turn to avoid obstacles, the alignment of the aircraft became perpendicular to the rows. Once the turn was achieved, the aircraft nose bounced several times with the last time resulting in collapse of the nose gear and an immediate stop of the aircraft. I immediately assessed the condition of my passengers. They advised that they were uninjured. I told them to immediately egress the aircraft through the cabin doors. They did and I followed. I then contacted flight services via cellular telephone to advise them of our landing without injury. I then contacted the local emergency services.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

It is my belief that because I failed to open each wing fuel cap and visually inspect the fuel level and condition, that I over estimated the amount of fuel on board. I trusted a cursory glance at the external fuel gauges and the electric fuel gauges in the aircraft. These items are mechanical, which can and do fail. Had I visually inspected the fuel inside the tank, I would have given a more critical evaluation of the level of fuel in the aircraft and would been able to add fuel.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
