NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On the morning of November 8, 2016, I rented an Aeronca L3 aircraft from Air1 Flight Training located at the Westfield Massachusetts Airport (BAF). My plan was to go flying with a friend, on what was a beautiful day with clear skies, unlimited visibility and calm surface winds. We would depart BAF, enjoy a 35-minute flight to FIT (Fitchburg Mass.) and have lunch.

I checked the weather and NOTAMS, put on sufficient fuel for our flight and conducted a thorough pre-flight.

Approximately 0930, we were airborne and on our way. When we arrived at FIT, the winds were still calm and we were the only aircraft in the pattern for runway 32.

I conducted 3 to 4 touch and goes, to maintain currency, and prepared for my final landing to grab a bite to eat.

I performed a wheel landing at approximately 500' from the approach end of the runway on the center line. As the airspeed bled off, I slowly lowered the tail and corrected for the normal turning tendencies. Suddenly and quite unexpectedly the aircraft began a hard-left turn. I was quite surprised and immediately tried to straighten it out. Attempting to avoid the approaching runway lights on the left side of the runway, I corrected hard to the right. The aircraft crossed the runway, as I attempted to bring it back under control. Everything would have been fine, but as the aircraft was straightening out we caught a runway light with the main gear. It immediately spun us around until we came to a stop on our left side with the left wingtip on the ground and the left wheel strut collapsed.

Since we were belted in and this all happened at a relatively low airspeed we were unharmed and easily exited the aircraft.

The next day after the shock of what happened wore off I conducted a post flight briefing with my passenger to try and determine the cause of events. Being very current as a pilot in this aircraft and having 29 landings in the last 30 days, I was unsure what caused this event.

My passenger, hearing my frustration, shared with me what he observed in the back seat as we landed. Apparently, as I was rolling out, he attempted to turn in his seat to look out the window for the restaurant and may have pushed on either the left rudder or the left brake pedal.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Break away runway lights would have made this a minor event with little damage to the aircraft.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

I am an active professional pilot with over 40 years of accident free experience. I fly approximately 500 hours per year in aircraft ranging from large Corporate Jets to light GA aircraft. I attend Flight Safety International every 6 months for recurrent training, 61.57 endorsements, 61.58 PIC Checks and CAT II Recurrent. In addition I complete monthly training modules on-line with Air Academy.

In addition to flying as an International Captain on Corporate Aircraft, I have been active as a Flight Instructor for over 40 years, providing Primary and Advanced Flight training as well as Biannual Flight Reviews.

I recently completed AOPA's CFI on-line refresher course.

I am also an aircraft owner of a light single engine aircraft which I fly approximately 100 hours / year.

In August of this year I received flight instruction from Air1 Flight training in their Aeronca L-3 aircraft and received my tail wheel endorsement. Since that time I have flown the aircraft monthly to gain experience and maintain proficiency. I have logged 8 hours total time with 54 landings. Prior to this flight I flew the aircraft twice in the previous month logging 27 landings. Landings consisted of Tail Wheel, Three Point and Cross Wind landings to maintain proficiency.
