Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to left wing.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On December 2, 2016 at approximately 10:00 am I departed the Spanish Fork airport on a southbound departure for St. George. I had checked the weather prior to leaving and had decided on alternative airports to land if weather changed on the way down. My flight instructor was also headed down to St. George in a separate plane with another student and left before I did.

I got up to my cruising altitude of 10,500 feet and followed my flight plan but making sure that I was staying clear of all clouds in the area. As I was getting closer to Cedar City the weather took a turn for the worse. I contacted my flight instructor asking him how the weather was further south and he told me that it was just getting worse. We decided that it would be better for me to do a touch and go in Cedar City and turn around to head back to Spanish Fork. I remember him asking me how much fuel that I had on board which was $\frac{3}{4}$ of a tank. I did my touch-and-go and began my climb back to 9,500 feet for my returning elevation. I had a headwind at this time. I had calculated that I had approximately 4 hours of fuel on board at the beginning of my flight and I was just over an hour into my flight because I had a tail wind on the way down.

As I approached the Nephi Airport I noticed that I had just under a quarter of a tank of fuel and believed that I had plenty of fuel to complete the flight. Somewhere between 10 and 15 nm out from the Spanish Fork Airport the plane ran out of fuel. I tried restarting the plane but had no luck. I had already started my decent for the airport and had lost some elevation from my original 9,500 feet. I was passing some large fields and all that I could see was city in front of me. I did not believe that I was going to be able to make it back to the Spanish Fork Airport with the altitude that I was at so I decided to land in a field. In the process of landing I ended up clipping a tree causing some damage to the left wing of the aircraft. I was able to safely land in the middle of a field. There were no physical injuries. There was however some damage done to the left wing of the aircraft and some small branches from the tree. My total flight time was 3.2 hours.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

By keeping the fuel tank as close to full as possible.
