Baxter, Ricky [REDACTED] SC 29671. Phone [REDACTED] Airplane registered to Baxnav Flight LLC. [REDACTED] [REDACTED] Lewes, Delaware 19958. PA-28-180, N2367R. Two soles on board Ricky and Patricia Baxter.					
Incident at KHQU Thomson-McDuffie County GA. runway. Runway 28 (5514x100). Landed, distance to be determined of feet in the grass on the airport property from the asphalt runway after contact with ILS lights. Sever Clear, clam winds Temp 50 degrees, 2228 Z (6:28pm) local time.					
December 02, 2016. The day started after checking weather and breakfast (Vegetable omelet, water to drink), at 7FL6, Spruce Creek FL. Formularizing and pre-fighting the plane. After lunch (Caesar Salad with a glass of water) checked weather, sever clear, clam winds Temp 69 degrees. Weight and Balance, Full fuel 50x6=300lbs, oil 7 quarts, 15lbs, two soles Ricky, 163lbs, Patricia, 135lbs front seats, luggage between back seat and luggage area 35lbs, for a total of 648lbs, well within normal category. Topped both tanks with 100LL to the very top, ran gas out on right wing on new paint. Start of fuel burn on the right tank, a longer than normal start up and run-up getting everything set up and check list completion, probably close to 20 minutes. Had switched to left tank in check list for take-off, new plane movement to make sure I did the procedure.					
Departed 1810 Z (2:10 pm), flew to KLEE Leesburg FL to get the secondary, (primary nav-com radio is a WAAS Garmin 430), number 2 nav/com kx155 radio adjusted. The flight was 20-25 minutes at 2300 RPM after climb out, fuel gage never moved. About the identical weather at KLEE, did not get fuel. Preflight both tanks were still at one side of collars, plane not setting perfectly level, departed Leesburg about 1930 Z (3:30 pm) local time.					
Everything in perfect working order on the plane, weather unchanged still clear. I programed in the GPS as part of the check list for the VFR flight at 5,500' from KLEE to KAND Anderson, SC, 2 hour and 58 minutes, at 10 gallons an hour should be fine with VFR daylight reserves, and on to KLQK.					
In flight, changed tanks based on GPS prompting and on the hour. After the first hour from Leesburg on the original left tank, at 2500 RPM, the left gage was at 1/2 of a tank of fuel, great I thought. After running the right tank for an hour the needle was 1/2 of a tank on the fuel gage. Back to left tank, which had settled to a little over a quarter on the gage ran dry shortly thereafter. Back to right tank. We were between Anderson and McDuffie, closer to McDuffie, made a 180 degree turn back to McDuffie. Pulled throttle back to 2000 RPM to conserve fuel, started a slow decent. Passed over McDuffie in a descending spiral, right tank went dry on down wind, rocked the wings but did not get a restart, switched back to left and rocked the wings and got a brief start but not for long, complete engine fuel starvation on base leg, made contact with the ILS landing lights and came to a full stop landing short of the asphalt runway. 2228 Z (6:28) weather clear, wind calm.					

(How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Thank you, I learned a great deal. More than you could imagine. Gas gages only are required to work/show empty. May be with age? may be just the type? The gas gages stayed full for almost 60 minutes., Then after a half of a tank on gages, you could watch them head for empty. The first two hours gave me a faults sense of security. We were over half way to Anderson, dialed in on the VOR, listening to weather in Anderson almost before we made the third tank switch.

Number 1). Most importantly, here is what I learned from this, with the fuel gages (floats) at the top of the tanks, the plane would burn an arbitrary (unfamiliar with the plane) amount of fuel without any movement in the fuel gages e.g., the flight to Leesburg. Another way to look at it, there is a lot less fuel in the bottom half of the *gage levels and it proved to be true. About a half hour or less of run time in the bottom half of the tanks based on the fuel gages.

Number 2). Human factor: Get-Home-Itis Syndrome. We planned on leaving from Spruce Creek around lunch time. My wife first time picking up an airplane. Got off to a late start, the dog had to be picked up at the kennel by 2200Z, we had a Christmas event with friends at 2230Z.

Number 3). Find out what the arbitrary burn is, I should have gotten fuel at Leesburg!
