NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departure KDTO around 11am Local time intending to return to KDTO within two hours of departure.

VFR departure no services besides traffic pattern when we returned to KDTO.

Parking area (engine start), brake test both brakes are functioning and stop the aircraft during the brake test. Taxi to runway 36 via Hotel, Bravo, Alpha to the Alpha 7 runup area. Student set parking brake instructor released and checked brakes again with both engines at 2000 RPM and right brakes and left brakes hold. After runup we depart vfr to the northeast to practice a few maneuvers (approximately 30-45 mins in the practice area). Check the weather and return to KDTO to enter the traffic pattern and do a few touch and goes. On the final landing we land (runway 36) I begin to use my brakes to help assist the student in braking and my brakes have no effect on the aircraft braking. Tower asks if we can make A3 taxiway, we announce we have had some sort of brake malfunction that we cannot make that taxiway so we roll to A2 exit the runway there. Right side (instructor) brakes are INOP, but the left side (student) brakes still appear to be functioning normally. We get our clearance from ground and continue our taxi slowly (under 1000 RPM) due to a brake malfunction. Taxi Alpha to Bravo left turn onto Hotel; student brakes are still functioning normally through all of the turns. We make the left turn into the parking area and continue forward slowly, brakes still seem to be functioning normally. We approach the right turn to reach the other side of the parking area and the turn does not feel normal (differential braking seems to not be working). As I realize this I tell my student to hit the brakes as he does I feel the plane start to pull left (either due to unequal braking or left rudder), I feel the plane drifting left I feel the right rudder pushing into my foot a little so I try to counteract this with Right rudder and by adding 100 RPM to the left engine to try and use differential thrust to help the plane turn. As soon as I realize this is not going to work I pull the throttles to idle, and cutoff the mixtures. The plane impacts Cessna N9528W on the right side of the body. The plane comes to rest. We exit out of the normal cabin exit on the right side call supervisors, take pictures and move the airplane off the ramp taxi area and into a parking spot. Maintenance later moves the plane into their hanger to inspect the aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Stopped on taxiway and not entered parking ramp.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Right seat brakes malfunction. (This is not the first time we have had issues with the right seat brakes.)
