Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

no damage to other property. Aircraft damage is bent gear leg and attaching structure.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I left my home base at Willow Airport at 9:30 AM with supplies for a customer and landed at a remote air strip approximately 45 miles West/Northwest of Willow. Before departing I obtained weather & runway conditions from my customer as usual as there is no weather info available for that area. On landing I noticed some snow drifts however the snow was only a few inches deep, (I landed with the wheels down on my wheel skies). On takeoff as I was launched into the air off a snowdrift & I heard something break, however the plane was flying fine and there was no indications of a problem other than the left tire looked a little off. I flew back to Willow Airport with no problem and landed with no problem. While taxiing off the runway I noticed a slight listing to the left so once clear of the runway I shut down, unloaded the airplane and determined that I should have my mechanic bring the plane into the shop for further inspection. It appears to have one gear leg bent and the tubing in the bottom of the fuselage where the olio struts attach are broken. The structure holding the gear olio struts being broken and will require a major repair could mean this is a reportable Incident, which is why I'm filing this report.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

I believe the snow drift was sharper and harder on the down wind side. At that runway I usually land one way and take off the other for tree clearance reasons when the wind is calm, as it was this time. In this case double checking the drifts by walking the runway after landing might have revealed the problem. Taxiing down and taking off the same direction as I landed may have made the drifts less abrupt.
