Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

One runway light on the south side of Rwy 09 was removed by wing of A/C.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Having obtained briefings from LMFSS website twice on day before and on the morning of the flight as well as a telephone call with LMFSS just prior to departure, departed KDVN and climbed through 7000ft and gave pirep of no ice encountered thus far. Then minutes later began picking up ice and asked for and received two lower altitudes. Noted temp guage showing temperature inversion and included these with pireps as descending. Asked for precautionary diversion to KPIA and then asked for nearest airport as I felt the ice was continuing to accumulate (nearly imperceptible accumulation then). Did not get out of IMC until ~2500ft. MSL with irregular bottoms and went direct KEZI, overflew airport and noted windsock, circled around and lined up for Rwy 09. Kept speed up and flaps up to not adversely affect lift. At short final felt I was a little fast and was concerned about slowing, especially about putting gear down and destroying any remaining lift. Over threshold backed off the power at about 75kts and then the gear auto-extended and then the stall horn went off. Added some power and lowered nose to control the impending stall and the plane immediately settled on the runway on all three landing gear. Concerned with directional control on the snow covered runway and delayed putting the gear selector switch in Down position, the gear was not locked and a slow retraction lead to the right side collapsing and then the nose gear followed. We slid very slowly down the runway with the prop striking and then slowly off into the grass on the south side. Turned the power off and my wife and I exited the aircraft quickly as a precaution for any possible arcing from damage from the gear collapse. No injuries.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I have committed myself to at least ten hours of intensive instruction with a well experienced instrument/commercial pilot on ADM, simulator high-workload scenarios and similar intensive training in aircraft. I have contacted an FAA CIRE examiner for advice on such an instructor and facility and am making contacts with the people and facility to do this.

Suggestion: it would seem logical to me that a gear Auto-extend mechanism, as exists on this AC, could easily have a gear locking mechanism installed with it so that when the gear does auto-extend that it would be locked.
