NOTAMS (D and FDC), AIRMETs, SIGMETs, PIREPs in effect at the time of the accident/incident:

DAMAGE TO AIRCRAFT AND OTHER PROPERTY

Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Passenger wing skin torn, and rib broken.					
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>					
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible. I was coming in to land on 1R at ICT. I made a very good approach and the landing was also very smooth and on the center line. After all three wheels were on the ground and after we had rolled several hundred feet, my tail swung out to the right sending my nose left. I tried to correct with rudder but I had no control after about 2 seconds and the plane turned more than 90 degrees sending us into the grass in between the runway and the taxi way. There happened to be a sign located such that it caught the bottom side of the right wing. Because I still had a good amount of speed going into the grass; I was unable to avoid the sign and it was knocked down. Once we were pointed into the wind I gained back control of the airplane. I was able to taxi out of the grass and back to the FBO. Nobody was injured in any way from the incident. I am confident now that the incident occurred because I neutralized the ailerons upon lading. Had I kept the ailerons corrected for the wind (270 @ 16 gusting to 26), then I would have maintained control and the airplane and would not have spun out.					

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

If I would have had with partial or no flaps, and had my ailerons corrected for cross wind this could have been avoided. Also i could have used an alternate runway to decrease the crosswind component.
