

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Three Rivers State: MI

ZIP: 49093 Country: USA

Latitude: 14.977690 Longitude: -85.704314

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 02/19/2017 Local Time: 3:30 pm
mm/dd/yyyy

Time Zone: eastern

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N11344

Manufacturer: Cessna

Model: T182T

Serial Number: T18208645

Year of Manufacture: 2006

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 3110 lbs

Weight at Time of Accident/Incident: 2700 lbs

Number of Seats: 4 Flight Crew Seats: 2

Cabin Crew Seats: _____ Passenger Seats: 2

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☐ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☒ Normal
- ☐ Aerobatic
- ☐ Balloon
- ☐ Commuter

☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft front wheel broke off and aircraft nosed into the ground and flipped onto its back. Engine was idling and all three propellers bent back to the engine. Engine mounts broke and wings bent. Vertical stabilizer and rudder smashed down. Pilot door hinges broke but door open easily for me to escape. Aircraft stayed completely intact except for nose wheel that broke off and caused it to flip over. The runway was a grass strip and it feels solid to walk on it but it was softer than I expected. The wheels made 6" wide and 10ft long impression into the ground about 3" deep. The damage to the runway is very minor and easy to fix.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was returning from "HAI" Three Rivers MI airport after doing three take off and landings there. As I approached my grass runway 02-20, winds were from 310 as reported by "HAI" 5 miles to the East of my grass strip. I approached from the south and lined up with the 02 runway. I had to clear power lines on the end of the field. I approached with full flaps at about 60 knots or slightly above. As soon as I cleared the power lines I pulled the throttle to idle and descended to the runway. When I flared I think my airspeed was too slow and bounced hard on the grass. When I bounced I thought it was hard but not that bad until I came off the bounce. The bounce caused me to pitch forward and hit the nose wheel hard on the second bounce even though I had control Yoke pulled all the way back. The nose wheel broke off and the nose strut went into the ground dug a trench about 50ft long, caught the propellers nose cone and slowly rolled forward onto its back.

The crash site is at [REDACTED]

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I should have descended with a higher angle of descent. I was carrying power on the engine to clear the power lines and then pulled the throttle back to idle and descended to the runway. I didn't have enough speed when I flared and bounced on the first touch down on the main wheels. The ground was softer then I thought and seemed to grab the main and pitched me forward as I bounced into the air. Even though I had the yoke pulled all the way back I did not have enough air flowing over the elevator to raise the nose. I think on the second bounce the nose wheel hit first and broke off. If I had a higher descent angle I would not have to pull the throttle back after clearing the power lines and I would have carried more speed into the landing flare and I would have had more control to keep the nose up and set the wheels down softer.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
