Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left main gear sheared off; nose wheel collapsed towards tail; left wingtip and outer leading edge skin bent; left wing root skin bent; left wing flap bent; left aileron bent; both propeller blades bent towards tail; lower portion of engine cowling damaged.
No known damage to other property.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Reviewed flight plan with CFI at ~0830MST (KU76->KONO->K0U9->KEUL->KBOI->KU76). CFI provided solo cross-country flight endorsement. Filed VFR flight plan & received WX/NOTAM brief via phone and checked via on-line sources. Departed KU76 at 1035MST. 2x touch-and-go and 1x stop-and-go at KONO. Low approach at K0U9 due to snow on runway. Since 0U9 was unworkable, proceeded to KS87 for additional pattern work since the airfield was confirmed clear during overflight enroute to 0U9. 1x touch-and-go KS87. During execution of follow-on stop-and-go at KS87, I touched down at 70mph, full flaps, 275ft beyond the rwy 12 threshold, on centerline. As I applied the brakes, the aircraft yawed left. Since 2-3ft snow berms were on each side of the cleared runway, I was concerned about wingtip clearance as a result of the left yaw. At ~1232MST, I executed go-around procedures, rotating at ~65mph. From what I recall, I did not sufficiently counter the high-power left yawing tendency and continued to approach the snow berm on the left side of the runway. When about 2ft in the air during the climb out, the left main strikes the snow berm. The left tire/brake shears; the aircraft settles in the infield (shearing the left main strut); and the aircraft comes to a rest facing 90 degrees left from the runway heading.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

- To consider the effect of snow berms on runway width availability, especially in a low-wing/full cantilever aircraft
