RE: Aviation accident Albert Whitted Airport

On the day of March 1, 2017 at approximately 11:30 I was piloting a Cessna Skyhawk 172SP as a student pilot of St. Pete Air and was in the process of executing my first solo flight. I had successfully taken off on clearance from Whitted tower on runway 7 and entered the pattern and leveled off at 800'. Once in pattern Whitted tower cleared me for runway 7 which I confirmed. On standard approach, the weather was clear and sunny with 1.0 knot winds at 100 degrees. I executed a successful landing from the west on an east heading and after touchdown proceeded to execute a standard touch and go.

I initiated full power followed immediately by raising the flaps from full to zero flaps. As is standard the plane pulled to the side and I compensated with standard right rudder to compensate but over compensated which pulled the plane to far right. In an immediate reaction to reverse this I applied left rudder to quickly and went immediately to far left causing a fishtailing effect on runway 7. Multiple attempts to correct this failed and as a result the plane pulled left into the grass off the north side of runway 7 where I contacted one of the runway signs. The front landing gear was damaged severely on collision with the sign and I immediately removed all power from the engine and activated breaking while still attempting to regain a straight course of the aircraft. The aircraft veered in the grass into a left sideways slide and impacted a temporary chain link fence and came to a halt severely damaging the left landing strut and gear as well as left wing tip. My final resting position was nose pointed westward on the north side of runway 7 just off the south base of the airport tower.

I immediately shut down avionics and the master to off, took accounting of my condition in the plane and proceeded to exit the plane from the pilot side of the aircraft which was jammed and not operable. I then calmly checked the co-pilot door which was stuck but opened with a firm jab. I released my seatbelt and exited the aircraft and upon notice of some fuel leaked from the left wing proceeded to a safe distance from the aircraft and awaited the arrival of airport staff and emergency response.

This concludes the details of the statement of this incident as best that I can recall them.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

In over compensating with right rudder and pulling the plane to far right on the runway I should not have attempted a correction by applying left rudder. I should have only released pressure on the right rudder which would have effected a turn back to the left in a much more controlled manner.
