

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: 1/4 mile east of Roxbury city center State: KS

ZIP: 67476 Country: USA

Latitude: unknown Longitude: unknown

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 03/02/2017 Local Time: 1315
mm/dd/yyyy

Time Zone: CST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N56552

Manufacturer: Maule

Model: M5 180C

Serial Number: 8080C

Year of Manufacture: 1984

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 2400 lbs

Weight at Time of Accident/Incident: 2100 lbs

Number of Seats: 2 Flight Crew Seats: 2

Cabin Crew Seats: 0 Passenger Seats: 0

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☐ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Propeller detached (broken Crankshaft) Both wingtips damaged
Engine mount broken Engine damaged
Engine cowling detached/damaged Navigation lights damaged
Windshield broken Left main landing gear damaged
Firewall damaged Artificial horizon instrument damaged
Fuselage damaged Left auxiliary fuel tank damaged
Fabric/aluminum skin damaged

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed KOZS 1010CST 03/02/2017 for Roxbury KS (325nm) full fuel (66 gal) intending to land on east-west (landing 2700) asphalt surfaced Gypsum Valley Rd (a county road, not state highway), approx 1/2 miles east of center of town (which is a 4 way stop sign). Visibility of potential vehicular traffic is excellent with the road being flat with no vegetation (bushes, trees, or growing crops) for miles in all directions from both altitude and on the ground. Made approx. 4 SLN weather checks enroute, last of which was approx. 1300. As I recall, reported wind 17 gusting 24 from 3300. At that time was flying at 2500 ft and could determine on ground wind direction approx. 3000 (pond water surface ripples). Target landing area is flat with only obstruction a single line of power line poles spaced approx. 200-300 ft, parallel to but approx. 45 ft to the south of the east-west road. The roadway is slightly elevated with shallow, gradually sloping ditches on both sides. The asphalt road is approximately 24 feet wide. The power line poles carry two lines placed one on top of the other with an approx. 3 ft separation distance. The bottom line is approx. 40 ft above the ground, and both lines are fairly tight with minimal drooping between the power poles. I had previously and repeatedly observed the target landing site and verified that it was within personal limitations I had previously set, with exceedingly minimal vehicular traffic (2/hr). Arriving at the target landing area I set up for a long straight-in final, full flaps, slowed to approx. 60MPH UAM, and as I flared to shed speed (approximately 4 ft off the ground), the right wing instantly shot up to nearly 60 degrees. I immediately gave it full power to abort the landing, full aileron right and nose down, and then nose back up. At that point I was headed for power lines (poles were still over 150 ft or more away). My normal reaction would have been to begin to bring the nose up a little more to gain altitude, but the sight of the power lines caused me to nose down a bit to clear (under) the power lines. I had cleared the power lines and thought I about had the plane back under full control when the left wingtip contacted the ground. The plane the cartwheeled to the right with the propeller striking the ground and the plane continuing its cartwheel movement to the right with the right wingtip hitting the ground. I'm not exactly sure what happened next, but think that the plane rocked back to the left with nose down (as in exactly perpendicular to the ground) because I remember directly facing the ground from about 4 feet before it settled back onto the main and tailwheel in an upright, normal stopped position. I immediately unbuckled the 3 point harness and exited the plane through the left door. I retreated approximately 30 feet to clear a potential fire/explosion, saw no flames or leaking fuel, so went back and turned off all power. The plane ended up, and came to a rest approx. 220 feet south of the road in a hayfield.

I attempted to fly the plane until the left wingtip impacted the ground after which time there was absolutely no control. I was aware of most, if not all, of the attitudes the aircraft took as it tumbled to a stop. I never lost consciousness, was totally uninjured and was in no way hampered from a very quick exit through the left, and already open door.

The propeller was detached from the engine and lying on the ground approximately 25 feet behind the aircraft (from direction of travel). The aircraft, except for the engine cowling, propeller, and windshield, stayed together, and did not disintegrate. The aircraft undoubtedly could be repaired, but the cost of which would almost certainly exceed its market value.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

First, I failed to check the ground wind conditions when I arrived in the immediate Roxbury vicinity by locating a nearby body of water to determine wind direction. Had I done so, I would certainly have landed on the north-south asphalt road headed out of Roxbury, landing 3600. I had previously surveyed that landing site also, and it is almost as good as where I attempted to land. My previous wind checks were 30 miles east and about 15 minutes earlier, and as the wind direction was shifting to the north, I was not fully aware of actual conditions at the landing site. I recommend ensuring that current weather conditions are positively identified immediately prior to setting up for landing.

Second, I had not taken into account the roadway shape and the impact it might have in a crosswind landing when I had surveyed the site previously. The shape of the ditch and road shoulder probably greatly affected the wind speed and pressure as it boiled over the road. As I flared with full flaps and came into ground effect, with potentially a significant change in wind speed and pressure (vortexes?), on the north (upwind) side of the road (under the right wing), coupled with the gusting nature of the wind that day; in hindsight its not surprising that this combination of circumstances resulted in a wing that shot up and put the aircraft in an unusual attitude that would be difficult from which to recover. Although I took a nearly week-long maule off-airport training course with CFI (5000 hr Maule) Rick Geiger in Cut Bank, Montana in 2015, there was no wind that week and we were not able to practice cross wind landing. I recommend that additional training be acquired in off-airport landing with a special emphasis on both site selection (with weather impacts) and cross wind landings.

Finally, the power line obstacle took away an option in the event of a problem in landing. Had it not been there, I believe I probably would have recovered full control of the aircraft. I recommend that off-airport landing sites be selected with no obstacles when possible.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
