Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Prop strike. Collapsed nose wheel strut. Crushed vertical stabilizer. Destroyed canopy. Wing tip damage. Wheel pants damage. Possible main gear damage. Aircraft is probably repairable.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed 069 at 0950 a.m. PST in an easterly direction climbing to 5500 feet passing near Napa County Airport (APC), then over Oakley. Turning in a SE direction passed 4 miles east of Tracy (TCY) and onto Los Banos (TCM) then turning S towards Mercey Hot Springs (CN22) and descending arriving about 11:20 a.m. PST.

I was in radio contact with the two other Aircrafts in our group. The first to arrive a Cessna 152 who had flown in here on a previous occasion, said he was landing to the South, as the runway 15 was slightly uphill in that direction. I passed about 2 miles E of the runway about 3000 feet, while the Cessna was landing. I then turned and flew by the runway to the north at 2200 feet. I looked for a windsock but I could not see one. I turned base and final about 1 and a half miles from the runway and made an approach, eng at idle, full flaps. I found that I was too high as I closed the runway so I called a go-round on the radio and over flew the runway.

This should have alerted me that there was a tail wind. I turned to the right as there were hills to my left and I was at low altitude. I over flew the runway and returned to the north end of the runway and set up for a second approach with power at idle and full flaps. When on final, very close to the start of the runway, the plane sank quickly and the main wheels touched soft ground, dug in and flipped the plane over instantly. There was no bounce or time to increase power. I immediately released the seat belt and turned off the fuel valve and main power as was able to crawl out on the right side of the cockpit as the canopy had been smashed on the side. As I stood up, I was aware of a significant wind from a northerly direction with some gusts probably from the hills in that direction.

The design of the Sonex fuselage with the high back of the canopy which acted as a roll bar, was critical in preventing a head injury in this accident. Sheriff's vehicles and a helicopter arrived very quickly, perhaps less than 30 minutes to this fairly remote area.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

If a wind sock had been installed at CN22, I would have landed from the opposite direction and probably not have had this accident.
